Ikusi Multimedia: Innovative technology for video & TV signal

We are experts in innovative and high technology solutions for the reception, processing and distribution of television channels and video, aimed at operators, installers and integrators and to the professional electronic equipment distribution sector.

Our clients' targets become our own and we establish long term relations with these clients, with solid foundations, based on the creation of a common area and a strong commitment to sharing the same vision.

To turn our proposal into reality, we have a highly qualified professional team (technical, sales and R&D services) that we place at our clients' service.

Ikusi Multimedia forms part of Ikusi, a technological company specialising in technological solutions and applications that give greater intelligence and efficiency to areas such as security in infrastructures, road traffic and railway mobility, airports and cities: it designs, develops and manufactures products aimed at multimedia and remote control environments and it is a renowned integrator for telecommunications and IT networks.

FLASHD antennas

NEW PRODUCT

1st&2nd
Dividend

HDT618V

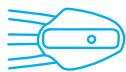

Antennas adapted to the new TV spectrum, rejecting LTE band interference.

Fully assembled

Automatic bracket

Instant opening with the touch of a button

Without tools

LTE rejection

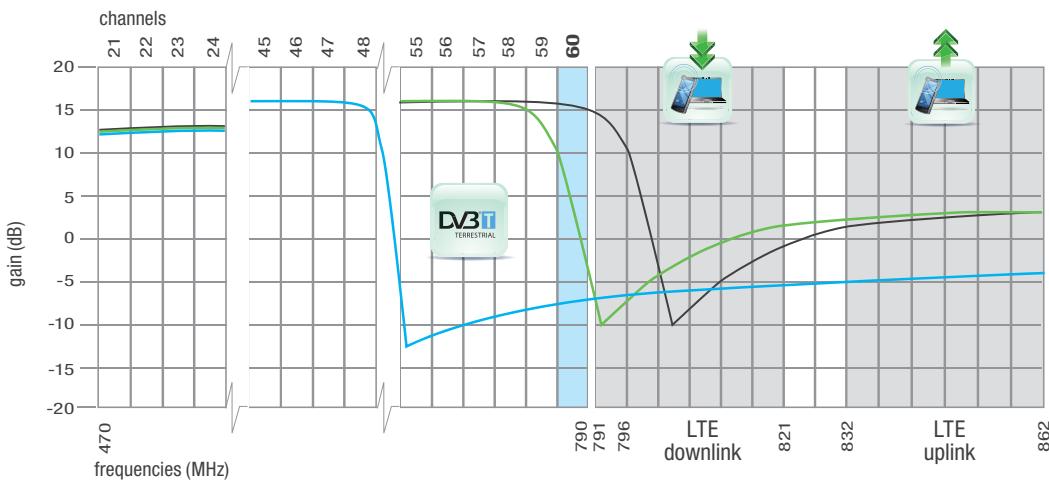

100% recyclable

Complete solution for receiving terrestrial TV signals.

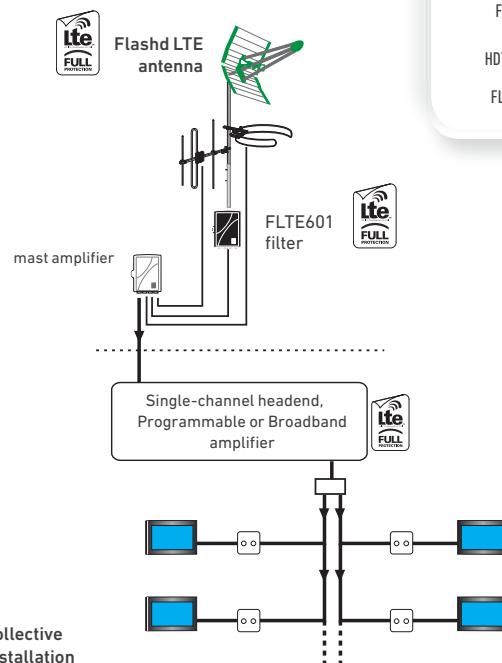

FLASHD LTE gain diagrams

- HDT618 antenna gain diagram (21 - 60 channels)
- HDT818 antenna gain diagram (21 - 58 channels)
- HDT694 antenna gain diagram (21 - 48 channels)

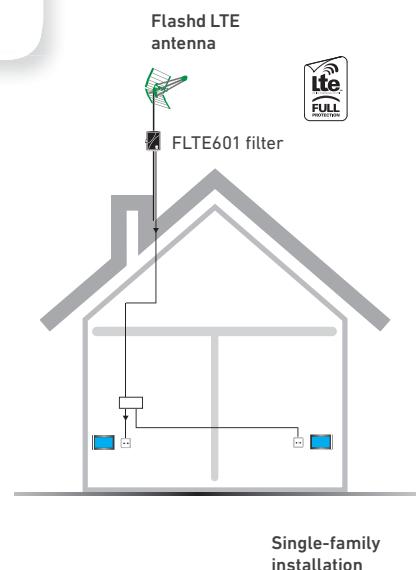

Installation example

Prevention Solutions against LTE signals

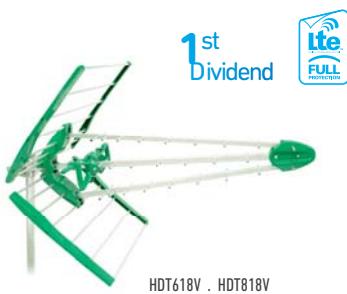

- In installations with channel 48
- In case of NOT having channels 59 and 60
- In installations with channels 59 or 60
- Proximity of 4G mobile base station

Antennas FLASHD. HDT Series

NEW PRODUCT

- Adapted models 1st and 2nd Digital Dividend.
- The key feature of the new Flashd LTE antennas is that they provide a strong rejection of LTE while maintaining current gains, very often without the need to incorporate a filter.
- Designed to help avoid the saturation of active equipment by LTE signals, rejecting frequencies above 694 and 790 MHz.
- HDT618. The antenna frequency response is cut off at channel 60.
- HDT818. The antenna frequency response is cut off at channel 58.
- HDT694. The antenna frequency response is cut off at channel 48.
- Supplied fully assembled.

- Unfold with a simple press of a button.
- Installed with one hand by means of i-fix automatic clamping.
- Passive compact dipole. Dihedral reflector, all aluminium parts.
- Fixed to masts of 25 to 50 mm. Adjustable tilt angle $\pm 40^\circ$.
- ABS enclosure with IP55 protection rating. Easy disassembly for fast coaxial cable connection.

Antennas FLASHD. HDT Series

NEW PRODUCT

- The smallest antenna range FLASHD for reception of TV signals in the UHF band, formed by a dihedral reflector made up of four aluminium tubes and a dipole (the same as the one in the FLASHD antenna).
- For vertical and horizontal polarization, allowing variation of elevation angle.
- Minimum packaging volume for transport and easy assembly without tools.
- Versatility in the pallet from 30cm to the desired height, in increments of 10cm
- Cable connection: F type connector, 1 screw-on plug and 1 rubber protection cap are supplied.
- Clamping system for masts Ø 25 to 50 mm

Headends

ONE Series

Programmable Multichannel Amplifiers.
Complete solution for signal processing of TV (terrestrial and satellite) in communities.

Designed for installations with satellite signal

Replaceable power supply

10 tuneable UHF filters with the variable band width of 1 to 5 channels.

Reprogrammable as many times as required
Programmed without the need for external control.

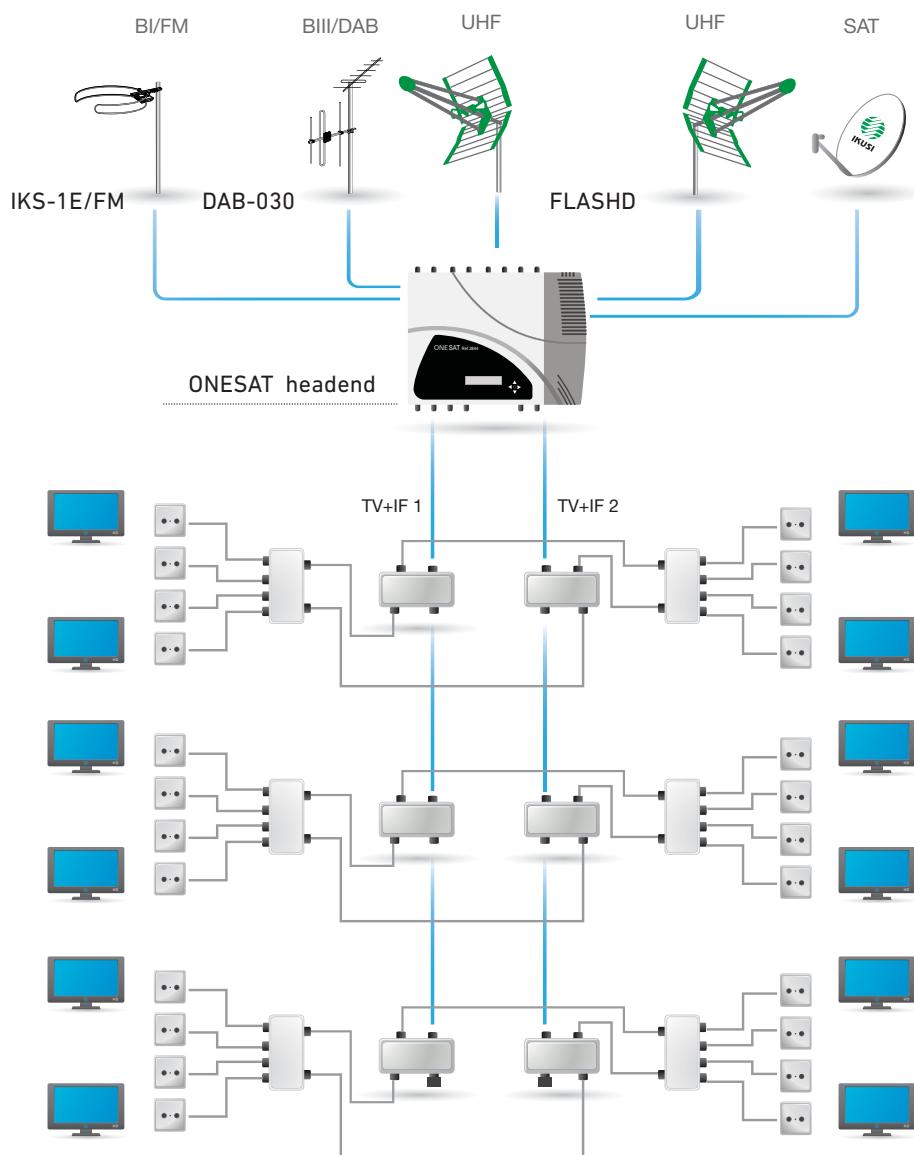

Adapted to the first digital dividend

Equalisation and automatic gain control.

-  Comprehensive solution for processing TV signals (terrestrial and satellite) in communications with over 20 outlets.

Installation example

Terr & Sat programmable multichannel amplifier. ONESAT

- Self-installation function.
- All settings are automatically memorised.
- Reprogrammable as many times as required. Programmed without the need for external control.
- 10 tuneable UHF filters with the variable band width of 1 to 5 channels.
- Terrestrial inputs (BI-FM, BIII-DAB, UHF and EXT) and satellite input with low noise figure.
- Two types of configurable output:
 - Configuration: 1 OUTPUT (high Power)
TV (123 dB μ V) + SAT1 (116 dB μ V)
 - Configuration: 2 OUTPUTS
TV (118 dB μ V) + SAT1 (116 dB μ V)
TV (118 dB μ V) + SAT2
- Allows the user to block the use of channels 61 to 69.
- Equalisation and automatic gain control.
- Internal configuration cloning with transferral to another equipment.
- Equipment locking by security code.
- Silent and extra slim.

Terrestrial programmable headend. ONEHOME

- ONE Home model is a programmable amplification headend designed to selectively filter analogue and digital UHF channels. Suitable for single-family and collective dwellings, they are the ideal solution for managing signals of different frequencies and bandwidths.
- Designed for single family homes.
- Self-installation function.
- 10 tuneable UHF filters with the capacity to process 1 to 5 channels each.
- Replaceable power supply.

Sat-IF combiner/amplifier

- 1 Satellite 950-2150 MHz input port, with adjustable gain and pre-emphasized response to compensate for cable losses.
- 1 Terrestrial coupling 5-862 MHz input port; 1 Combined Satellite+Terrestrial output port; 1 output test port.
- Mains powered 50/60 Hz. Electrical safety protection level: Class II. Mains lead and plug included.
- Line powering of LNB. Generation of voltage/tone for selection of H/V polarisation and high/low frequency sub-band by the small plug-in bridges provided.
- Small plastic box, with protective cover. Internal zinc alloy chassis. F type connection.
- Indoor mounting. Wall- fixing.

MODEL	AFI-840	
REF.	1164	
IF Sat band	MHz	950 - 2150
Response flatness	dB	± 1,5
Gain	dB	34 - 40 (6 dB fixed slope)
Continuous gain adjustment	dB	0 - 18
Output level (-35 dB IMD3, EN 50083-3)	dB μ V	120
Input/output return loss	dB	≥ 6
Noise figure	dB	< 8
TV band	MHz	5 - 862
TV coupling loss	dB	≤ 1,5
Output test (TV+IF)	dB	-30 ± 1,5
Mains voltage (50/60 Hz)	VAC	100 - 240
Consumption	W	6
Insertable voltage/tone to Sat-IF input port		+13 VDC / +18 VDC 0 / 22 kHz
Max LNB power current	mA	200 (at +13 VDC & at +18 VDC)
Dimensions	mm	120 x 85 x 50

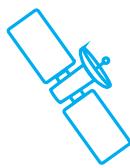

Installation example

NBS Series

Broadband amplifiers with high, medium and low power.

Models with satellite input

Replaceable power supply

Interstage input attenuators equipments

Easy to set up

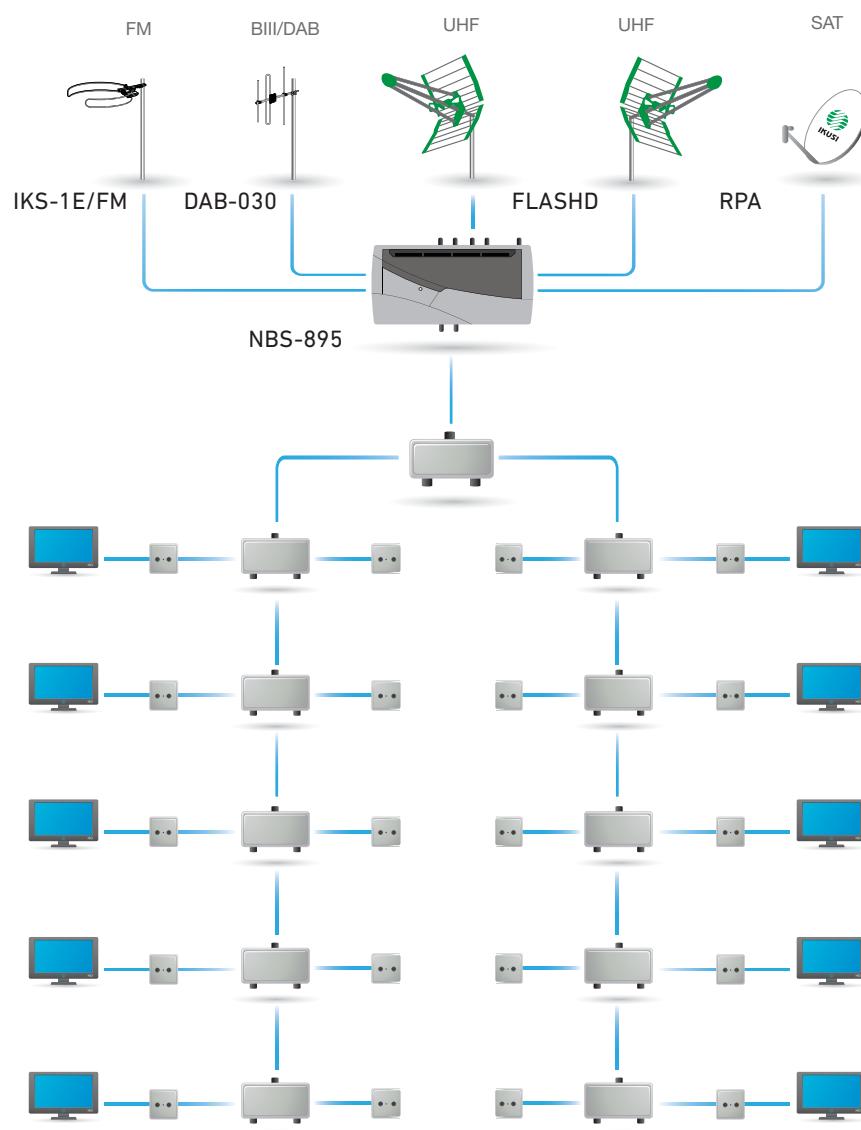

Adapted to the digital dividend

Maximum performance

- Amplifies, equalizes and combines analog or digital radio and television signals in medium size facilities.

Installation example

Terrestrial and satellite headend amplifiers. NBS

- High-power broadband amplifiers, for terrestrial and satellite signals in small installations.
- Three models:
 - NBS-801 (1 broadband input ; 1 output),
 - NBS-804 (4 inputs BI/FM-BIII/DAB-2xUHF ; 1 output)
 - NBS-895 (5 inputs BI/FM-BIII/DAB-2xUHF-IF SAT ; 1 output)
- Interstage input attenuators.
- Powered by switching power supply, in removable box.
- By inserting a bridge, you can select the cutoff frequency low-pass filter in the upper UHF, switchable between 862 MHz and 790 MHz.
- Power passing to input.
- Zamak housing with protective cover for adjustment potentiometers.
- F Connectors. Wall fixing and indoor mounting. Grounding terminal.
- Compatible with UNICABLE TM.

1. Compatible with UNICABLE™

NBS-204

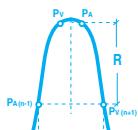

- Low-power broadband amplifiers, for terrestrial signals in small installations.
- Input attenuators.
- By inserting a bridge, you can select the cutoff frequency low-pass filter in the upper UHF, switchable between 862 MHz and 790 MHz.
- F Connectors. Wall fixing and indoor mounting.

SZB Series

Modular Headend amplifier channel TV and Radio.

High Selectivity

Gain adjustment.
Interstage attenuators

Rejection LTE frequencies

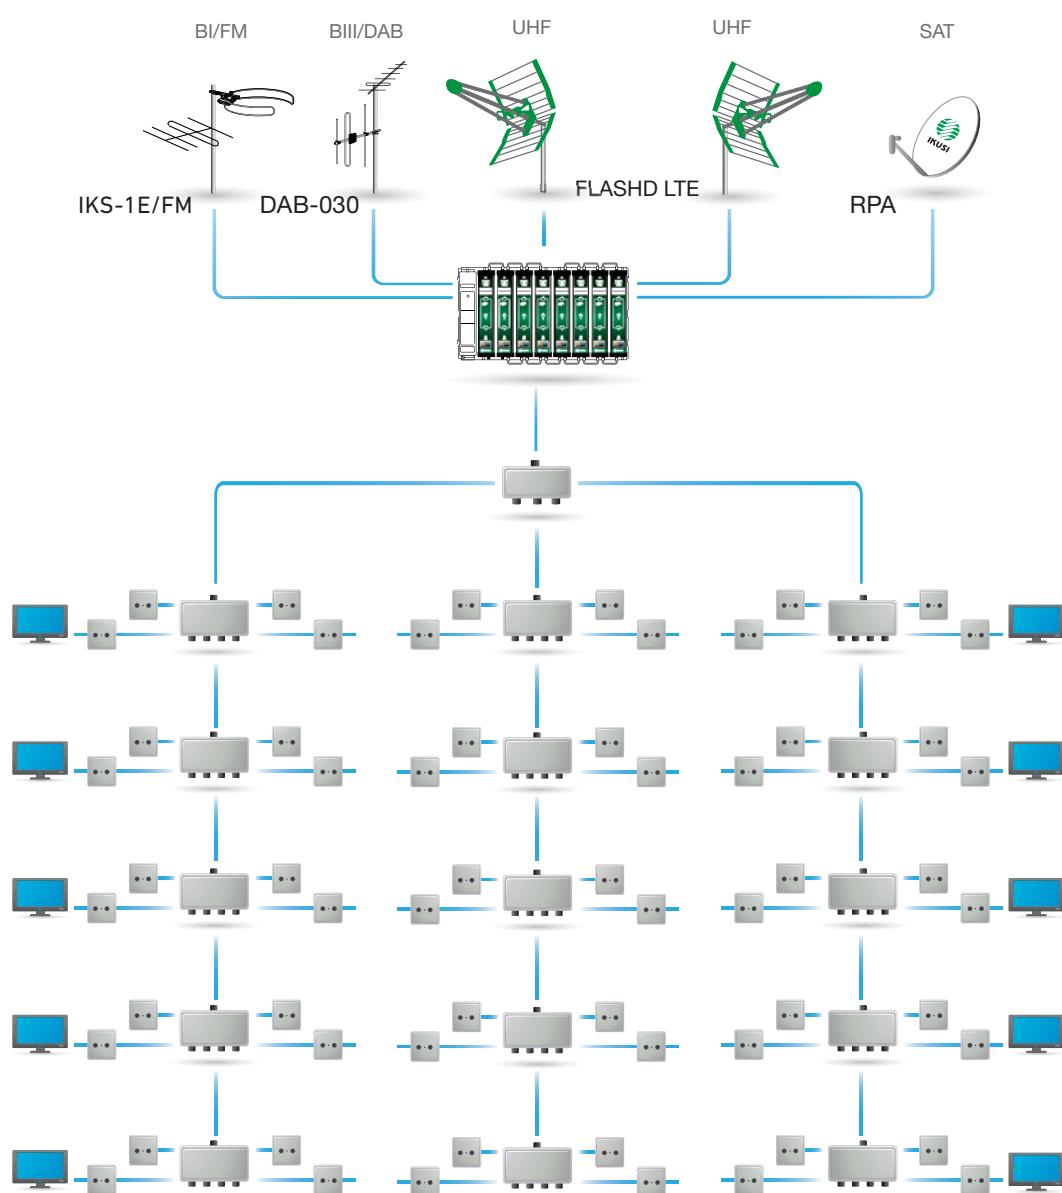

Toolless mounting

High output level

- TV amplifiers single-channels, multichannels, modulators and Sat-IF combiner ready for digital dividend.

Installation example

Multichannel Headend

TV single-channel amplifiers

TV Multichannel amplifier

- Ready for digital dividend.
- TV single-channel amplifiers, Z input de-multiplexing and Z output multiplexing. Adjacent channel operation allowed in UHF band.
- FM Radio and DAB Amplifiers.
- It is advisable to place the amplifiers on the base-plate following an increasing order of number of channel (frequency). The RF output of the headend will be taken from the last one of the modules ordered in this way.
- Toolless mounting.

- TV multichannel amplifier.

Especially created for amplification of combined analog and digital channels. Z input de-multiplexing and Z output multiplexing. Adjacent channel operation allowed in UHF band.

- Output voltage +24 VDC is automatically connected to the RF modules through a connecting bar at the base-plate.
- Toolless mounting.

MODEL	SZB-129	SZB-128	SZB-168	SZB-139	SZB-148 *

Z Output return loss	dB	≥ 6	
Consumption	mA	100	
Dimensions	mm	190 x 38 x 87	

* SZB-148 high selectivity. Amplification of one analog or digital UHF channel, either non-adjacent or adjacent.
Each amplifier is packed with 1 Z bridge Ref. 2247

1 Also 1 channel S3 to S18.

2 Also 1 channel S19 to S38.

3 Adjustable -20 dB (-30 dB in SZB-148). Inerstage attenuator in all models —maintenance of low noise figure—.

4 Subtract 3.5 dB if Z input demultiplexing is used.

Particular ordering instruction: Specify the TV channel for single-channel amplifiers.

Sat-IF Combiner/Amplifier

Power supply

- 1 Satellite input 950-2150 MHz with adjustable gain and sloped response to compensate for cable loss; 1 terrestrial coupling input 5-862 MHz; 1 satellite+terrestrial output.
- Automatic power connection, either via contact terminal (SZB application) or via terrestrial coupling input port (MZ6 applications).
- LNB coax line powering. The SZB-190 generates the required voltage/tone signals for the selection of H/V polarisation and high/low frequency sub-band. Programmable values by micro-switches.

- Electrical safety protection level: Class II. Mains lead with bipolar plug.
- Output voltage is additionally available from two auxiliar jacks, for connection to one or two power inserters (mast-head amplifier remote powering). Banana jumper supplied.

MAC Series

High definition Standalone modulator.

HDMI input
HD multimedia interface

DVB-T / DVB-C / IP outputs

CVBS inputs and stereo audio

Video playback
through USB port

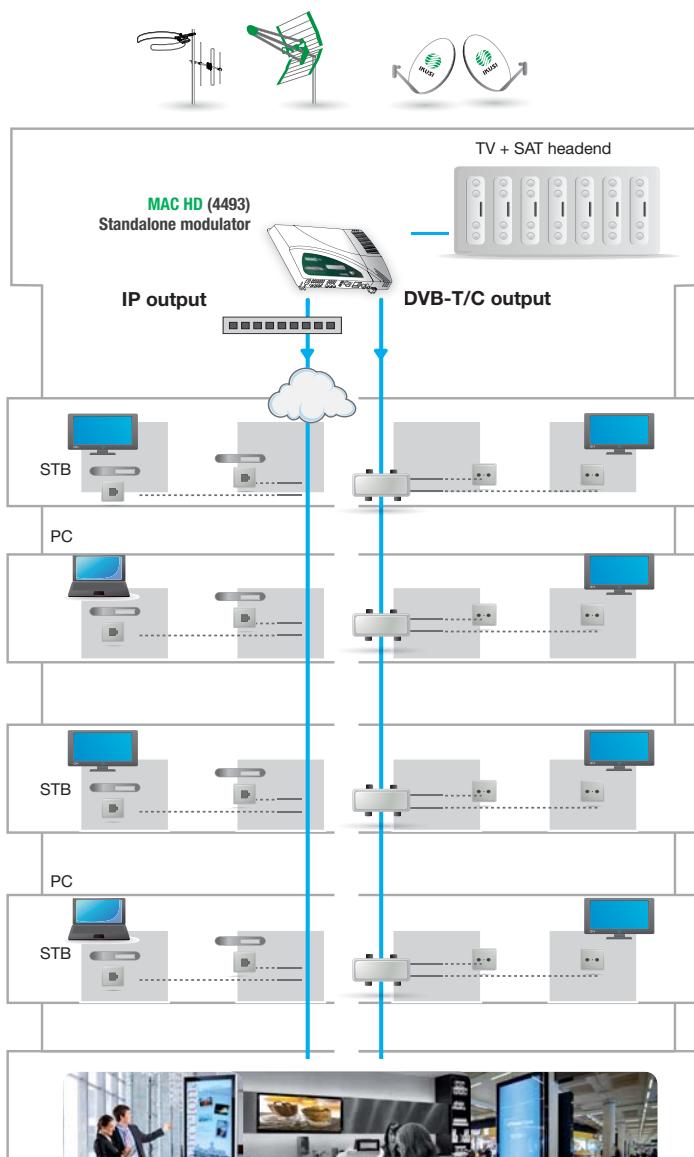

HD-SDI input
Digital video interface

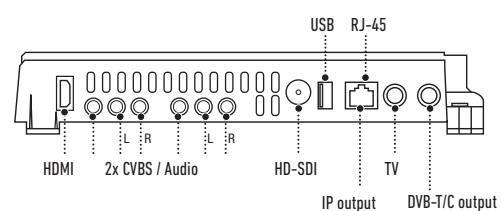

Remote control via web

- A solution that allows audio and video, HDMI or HD-SDI signals to be inserted in DTTV distributions and an output signal in DVB-T / DVB-C and IP to be obtained.

Installation example

Digital signage application. Allows any business to economically and straightforwardly generate its own advertising and information channel without any equipment other than the MAC HD modulator itself.

Possible combinations:

- SD CVBS/Audio + SD CVBS/Audio | 2 simultaneous SD channels
- SD HDMI + SD CVBS/Audio | 1 channel SD + USB
- SD SDI + SD CVBS/Audio |
- SD + USB |
- HD HDMI | 1 channel HD
- HD SDI | 1 channel HD + USB
- HD + USB |

Modulators/Encoders

High definition standalone modulator

MAC-HD

- Audio/Video ▶ DVB-T ; DVB-C and IP
- Two analogue video and audio channels through 6 RCA jacks.
- Digital audio and video channel in HDMI format through HDMI connector.
- Digital audio and video channel in HD-SDI format through BNC connector.
- Web interface configuration by application IKUSI HEADEND DISCOVER

New option with QAM output.

The MAC HD model is a standalone modulator unit which can handle different audio and video formats to make up a high-definition DVB-T/C and IP channel which can be active simultaneously.

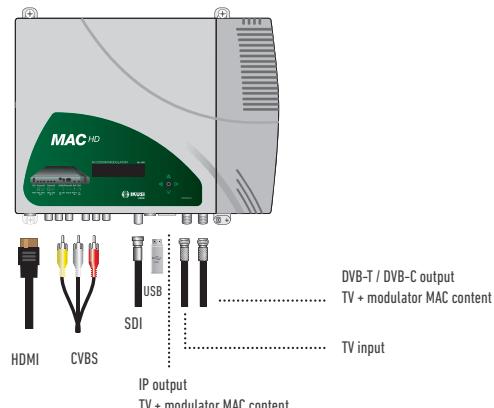

The unit has three output types:

- DVB-T ; DVB-C and IP.

This product aims to meet video signal distribution requirements in residential facilities, hotels and landmark buildings, along with video surveillance installations with COFDM/QAM and IP digital TV modulation. The MAC HD also has a USB interface to add new functions thanks to the evolving computer software, such as video playback from a USB memory stick for digital signage and other possible future additions.

The end user can program the modulator in different ways:

- LCD and joystick placed on the front of the unit.
- Web interface configuration by application IKUSI HEADEND DISCOVERY. (Programming with IP output is only possible with this mode).

USB PLAYER function. Create your own advertising and information channel using only your Mac Home.

The Mac-Home modulator now has a new function to create and play back videos created by users with the software supplied with the product.

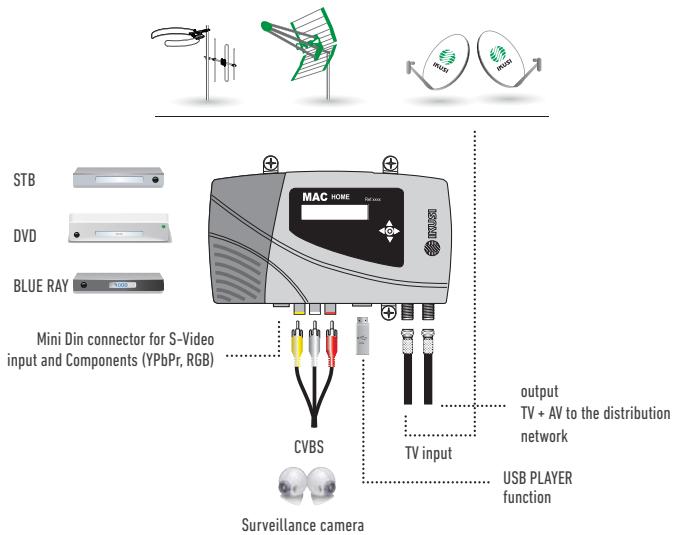

The Mac-Home modulator now has a new function to create and play back videos created by users with the software supplied with the product.

Users can create files containing images, videos and music in a simple and intuitive way, and play them on a television network such as a Service Channel (in communities of residents) or those designed for Digital Signage in countless applications, including advertising and information (hotels, restaurants, shopping centres, supermarkets, exhibition rooms, conferences, museums etc.).

After downloading and installing the "conversor-mac-installer.exe" application on their PC, users create a composition of images with audio that can be played back through the modulator's USB port.

Video and image files in the following formats are supported:

- Image: jpg, png, bmp, gif
- Video: wmv, mpg, mp4, ts, avi
- Audio: mp3

... for communities of residents an information channel on their television

... for restaurants information about daily menus, special deals, etc

... for hotels meeting rooms, exhibitions, messages, etc

... for Public Spaces advertising, user information, news, etc

... for shopping centres new collections, special deals, etc

High definition standalone modulator. HDMI, CVBS inputs

MAC-HOME HD

- Audio/Video ► DVB-T and DVB-C
- A CVBS analogue audio and video channel through RCA jacks.
- A digital audio and video channel in HDMI format through an HDMI connector.
- Can play back content from the HDMI or CVBS connector and the memory stick at the same time.
- Maximum compression quality MPEG2 & MPEG4/H.264.

Mains voltage	VAC	230 - 240
Firmware upgrade		Yes, web or USB interface

The MAC HOME HD model is a standalone modulator unit which can handle different audio and video formats to make up a high-definition COFDM channel.

The unit has two types of non-simultaneous input:

- A CVBS analogue audio and video channel through RCA jacks.
- A digital audio and video channel in HDMI format through an HDMI connector.

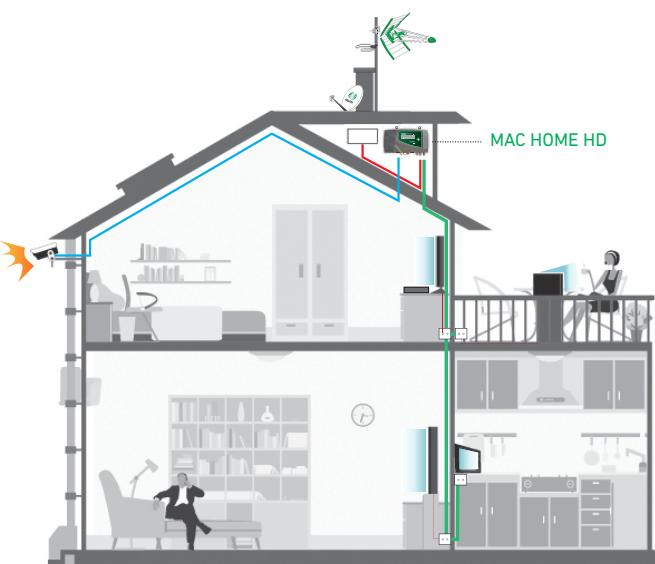

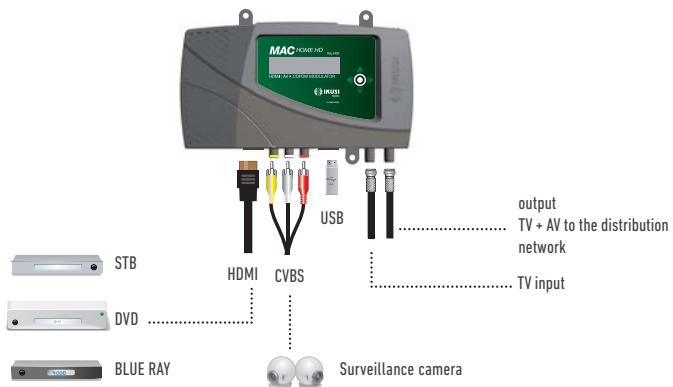

With an MPEG2 encoding stage in SD and MPEG4/H.264 in HD and audio compression formats MPEG2 L1/L2, LC-AAC, HE-AAC.

The MAC HOME HD modulator also has a USB Interface to add new functions thanks to the evolving software of the unit, such as: video playback from a USB memory stick for digital signage and other possible future additions, along with firmware upgrades.

The MAC HOME HD unit can play back content from the HDMI or CVBS connector and the memory stick at the same time.

The modulator is programmed by the end user through an LCD display + 5-position joystick as a keypad.

This product aims to meet video signal distribution requirements in residential facilities, hotels and landmark buildings, along with video surveillance installations with COFDM digital TV modulation.

Modulators/Encoders

High definition standalone modulator. HDMI and CVBS inputs

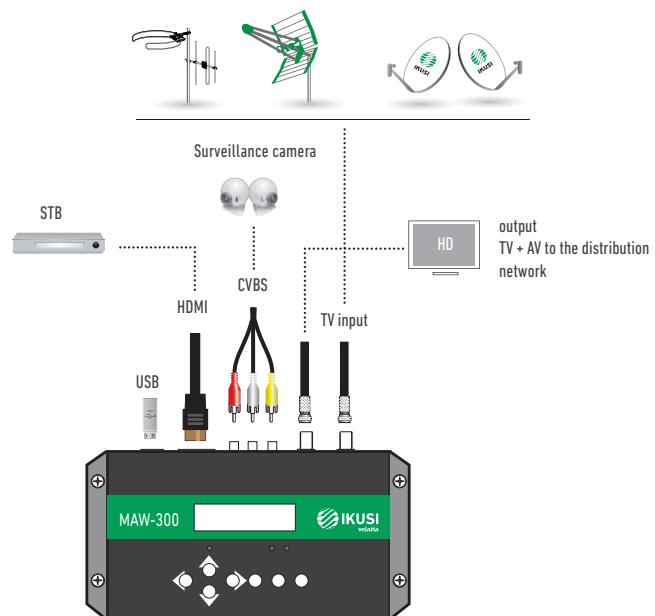

NEW PRODUCT

- Audio/Video ▶ DVB-T
- A digital video and audio channel in HDMI format, HDMI connector.
- An analogical CVBS audio and video channel, RCA connectors.
- MPEG4/H.264 coding in HD.
- Cascade installation.
- Possibility of changing the LCN.

- Local configuration with LCD screen.
- Household modulator that allows audio and video signals to be inserted into TV distributions.
- The input source can be: a Blu-ray player, satellite receiver, closed circuit surveillance camera, DVD, etc.

- Excellent modulation quality MER: 38dB.
- LCN support (Logical Channel Number).
- AV1 to AV4 are also serially digitalised, coded in MPEG2 and modulated in COFDM. The COFDM base band signal is modulated on an RF carrier that can be adjusted at the output to the VHF and UHF bands.
- RF COFDM DVB-T output.

MODEL		MAC-401
Ref.	4485	
Input		4x CVBS
Video input level (CBVS)	Vpp	0.7 ... 1.4
Video coding		PAL/NTSC/SECAM
Audio input		4x mono/stereo
Audio input level	Vpp	0.5 ... 4.0
Compression video		MPEG2 MP@ML
Video resolution		720x576, 25 fps (PAL), 720x480, 30 fps (NTSC)
Video Bit Rate	Mbits/s	3 - 10
Audio		MPEG1 Layer II
Audio Bit Rate	Kbits/s	96, 128, 160, 192, 224, 256, 320, 384
Insertion of tables		PAT, PMT, SDT, NIT
Configuration		Channel Name, SID, LCN, NID, Network Name, Provider Name, TSID, ONID, NIT MODE, LCN Private Descriptor
Output		DVB-T according to ETSI EN 300 744
Bandwidth	MHz	6/7/8
Carriers		2K (UK) / 8K (FR)
MER	dB	38 (typ.)
Central frequency	MHz	51 - 858
Output level	dB _µ V	≥ 80
Output attenuation	dB	1
Level adjustment	dB	-15
Frquency stability	ppm	≤ ±30
Noise figure ($\Delta B=8\text{MHz}$)	dBc	≤ -70
Loopthrough		Yes
Power supply	VAC	230 - 240
Consumption		0.45 A / 30 W
Dimensions (without connectors)	mm	300 x 250 x 44
Weight	kg	2.5
LAN connector		RJ-45
Remote control		Ethernet 10BaseT 10/100 Mbits/seg
Local interface		LCD + Joystick
Remote interfaz / Update		Web / Ethernet

- Editable channel name and information to be shown on the TV set.
- Modulated channel and USB player channel can transmitted simultaneously.
- Processing and insertion of PSI/SI tables.
- Remote control and firmware updates via web/Ethernet.
- User interface with LCD display and control button for basic configuration.
- All settings are automatically memorised.
- Reprogrammable as many times as required.
- Firmware updated via Ethernet connection with web browser.
- Replaceable power supply.

Serie ClassA

ClassA is a complete range of functional modules for processing of analogue and digital terrestrial, satellite, cable and baseband signals.
It also includes optical transmitters and receivers and IP streamers.

More languages

It allows pay-TV channels to be received

Supports SD and HD channels

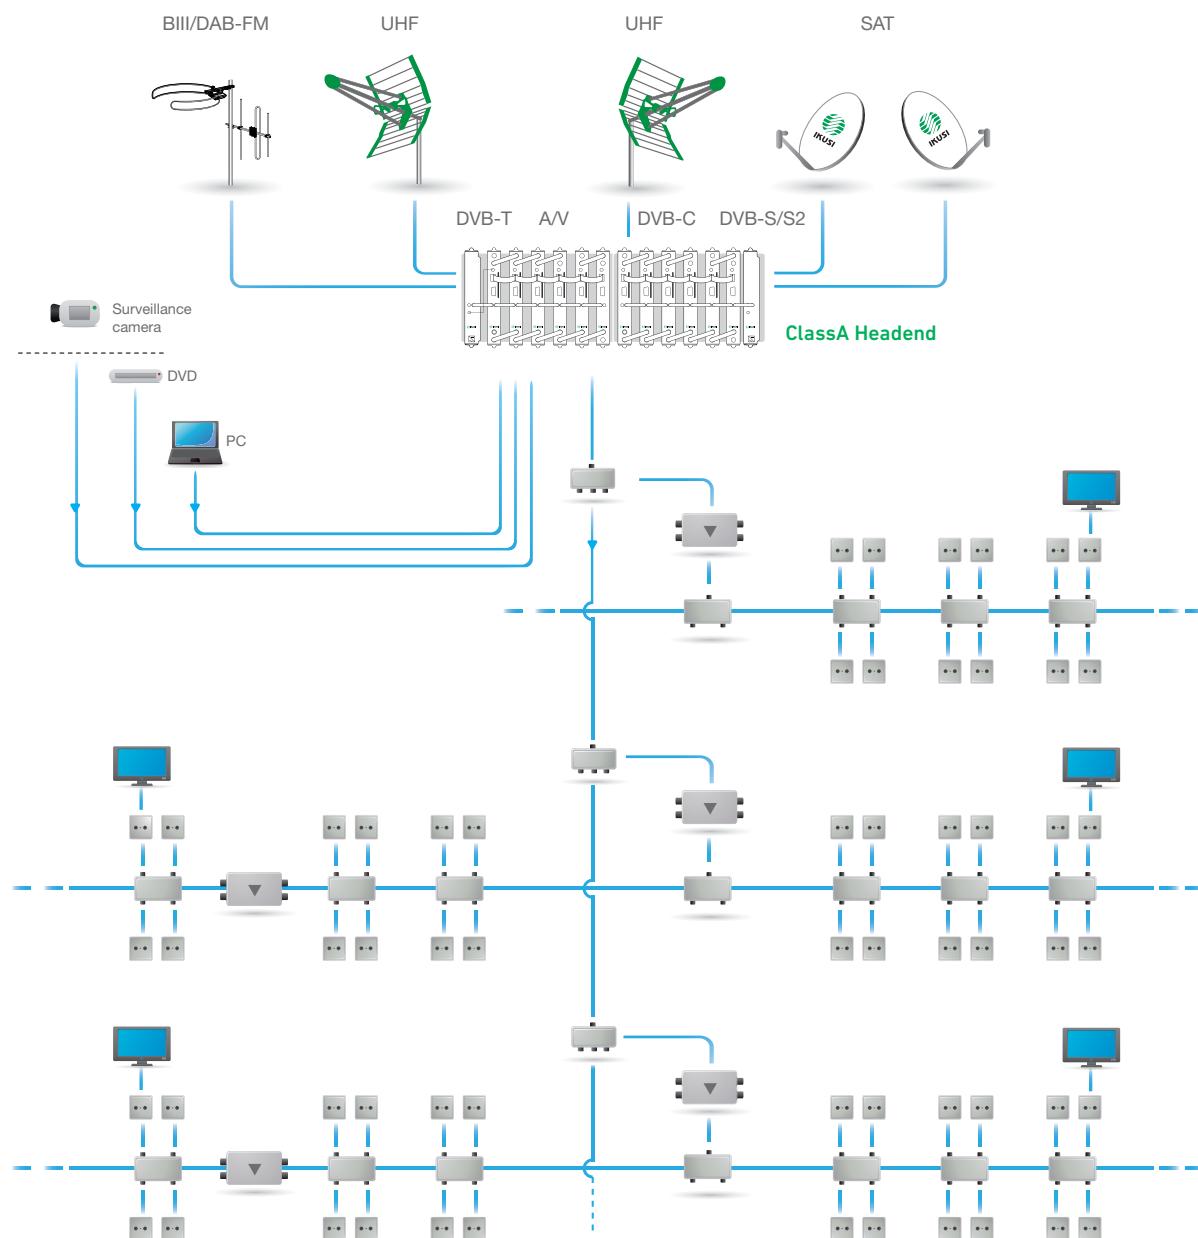

Logical Numbering Function for LCN Channels

Strong when there are cuts in the signal or power supply

- A solution combining reception, modulation, security and ease of use and allows to manage any type of TV/vidéo signal.

IKUSUP bus connector	(2x) 4 pin socket	
Dimensions	mm	230 x 195 x 32

• **Digital transmodulation (QPSK/8PSK to COFDM) with Transport Stream Processing.** The QPSK or 8PSK channels located in the Sat-IF frequency band (950-2150 MHz) are transformed to COFDM channels located in the 47-862 MHz band. Range includes two transmodulators: MTI-900 and MTI-800. The MTI-900 has Common Interface (EN 50221) for discretionary de-encrypting of TV programmes.

- A MTI headend includes:
 - As many MTI transmodulators as COFDM channels to be distributed. At MTI-900 module, one CAM (Conditional Access Module) containing the Operator's Smart Card must fit the front panel slot.
 - One HPA that amplifies the sum of the output COFDM channels from the transmodulators.
 - One or more CFP Power Supplies.
 - One or more Rack-Frames or wall-fixing Base-Plates. The base-plates can be joined horizontally.
 - Usually, housing units for the base-plates.
 - If the headend is large, one or more AMX-400 combiners.

The MTI headends provide a COFDM multichannel signal whose level is appropriate to feed the distribution network. An extension input at the HPA amplifier allows easy coupling of the wideband 47-862 MHz signal provided by another existing headend. You can use your TV DTT (Digital Terrestrial Television) for programs receiving satellite channels treated at the station MTI.

DVB-T/DVB-C and IP output

A/V ► DVB-T ; DVB-C modulators

MHD-201

MHD-202

- The MHD-201 is a module designed and manufactured completely with in-house technology, that is able to treat different video and audio formats, to create a high-definition output channel in DVB-T/C and in IP which can be active simultaneously.

- The unit has various types of inputs:

Two analogue audio and video channels, through RCA connectors.
One digital audio and video channel in HDMI, through an HDMI connection.
One digital audio and video channel in HD-SDI, through a BNC connector.

- High definition RF output channel in DVB-T and in IP which can be active simultaneously.

- This product solution fulfills the needs of video signal distribution in residential facilities, hospitals, hotels and unique buildings and also CCTV integration in existing installations. The MHD-201 has also an USB interface for HD video contents playback from a USB memory automatically.

- The MHD-202 is a module designed in-house and manufactured with our own technology, capable of modulating two HD audio and video sources to make up one or two high definition RF output channels (in accordance with the input bitrate) in DVB-T and in IP which can be active simultaneously.

- The unit is fitted with two HDMI digital audio and video inputs through HDMI connectors.

- The output stage is capable of generating two RF channels, one for each HDMI input.

- Moreover, the MHD-202 has a USB interface for automatic playback of SD and HD content from a pendrive.

- This function allows applications such as:

- use in digital signage,
- creation of an information channel,
- integration of any video source in the existing TV network.

- The modulator is programmed by the end user using a local or remote web interface through an RJ-45 connector.

- This modulator is compatible with the application for PC:

Selectivity for 7 MHz channels	dB	> 9 ($f_c \pm 3.75$ MHz) > 70 ($f_c \pm 4.75$ MHz)
Selectivity for 8 MHz channels	dB	> 18 ($f_c \pm 4.75$ MHz) > 70 ($f_c \pm 5.25$ MHz)
Image rejection	dB	> 70
Adjustable output level	dB μ V	55 to 70
Output loop-through loss	dB	1.1 (typ) .. 1.4 (max)
Group delay	ns	< ± 40
Spurious in band	dBc	< -58
Phase noise of output channel (@ 1kHz)	dBc/Hz	< -92 (processor) < -80 (converter)
Broadband noise ($\Delta B=5$ MHz)	dBc	< -75
Supply voltage	VDC	+12
Consumption	mA	540
Operating temperature	°C	0 ... +45
Input RF connector type		(1x) female F
Output RF connector type		(2x) female F
DC connector type		"banana" socket
Programming interface		RS-232 / DB-9
Dimensions	mm	230 x 195 x 32

- Double conversion in the 45-862 MHz frequency range. IF SAW filtering.
- Agile Processing module, usable either as channel converters (output channel is different to input channel) or as channel processor (output channel is the same as input channel). Adjacent channel operation at input and output.
- A TPC headend includes:
 - As many TPC processing modules as channels to be converted or processed.
 - One HPA amplifier that amplifies the sum of the combined output TV channels from the processors.
 - One or more CFP power supplies.
 - One or more rack-frames or wall fixing base plates. The base plates can be joined horizontally.
 - Usually, housing units for the base plates.
 - If the headend is voluminous, one or more AMX-400 combiners.

The TPC headends provide a TV multichannel signal whose level is appropriate to feed the distribution network. An extension input at the HPA amplifier allows easy coupling of the wideband 47-862 MHz signal provided by another existing headend.

Dimensions	mm	230 x 195 x 32

- The TGT is a DVB-T to DVB-T Transport Stream Regenerator/Processor.

The product is designed to correct and rebuild a poor quality COFDM signal back to Quasi Transmission Standard. The product also allows the user to change various parameters of the regenerated COFDM stream at the output.

- A TGT headend includes:

- As many TGT Regenerators as COFDM channels being received.
- One or more AMX-400 combiners if the headend being assembled is extensive.
- One HPA Amplifier to launch the combined output COFDM channels from the regenerators.
- One or more CFP Power Supplies.
- One or more Rack Frames or wall mounting Base Plates. The base plates can be joined horizontally.
- Housing units for the base plates if required.
- If the headend is large, one or more AMX-400 combiners.

The TGT headends deliver a multichannel COFDM signal with sufficient power to drive a distribution network.

An extension input at the HPA amplifier allows easy coupling of the wideband 47-862 MHz signal provided by other existing headend equipment.

AM output

DVB-S ► AM transmodulator

- Reception of encrypted Sat-TV programs.

Standard DVB-S / MPEG-2 (EN 300 421).

- Receiving Modules with Common Interface (EN 50221). The encrypted TV programmes transmitted on QPSK channels are de-encrypted and presented on conventional VHF/UHF channels (any TV system or Colour system).

- An SRC headend includes:

- As many SRC Receiving Modules as de-encrypted TV programmes to be distributed. At each module, one CAM (Conditional Access Module) containing the Operator's Smart Card must fit the front panel slot.
- One HPA Amplifier that amplifies the sum of the receivers' output TV channels. One or more CFP Power Supplies.
- One or more Rack-Frames or wall-fixing Base-Plates. The base-plates can be joined horizontally.
- Usually, housing units for the base-plates.
- If the headend is large, one or more AMX-400 combiners.

The SRC headends provide a TV multichannel signal whose level is appropriate to feed the distribution network. With an SRC installed in the headend, the end user does not require a Set Top Box or any additional devices to view the de-encrypted digital TV programs being distributed. An extension input at the HPA amplifier allows easy coupling of the wideband 47-862 MHz signal provided by another existing headend.

An SRC receiving module with CAM+Operator's smart card inserted, carries out a complete channel processing from the input to the output:

- tunes a DVB-S Sat-IF digital channel in the 950-2150 MHz band,
- selects an encrypted TV programme from the multiplex being received, and
- de-encryptes and presents it on a conventional TV channel that is selectable throughout the 45-862 MHz.

Programming interface		RS-232 / DB-9
Dimensions	mm	230 x 195 x 32

- Terrestrial TV reception, standard DVB-S / MPEG-2 (EN 300 421).
- Digital-to-Analogue Transmodulation Process (QPSK - AM) that presents the clear TV programmes transmitted in QPSK Sat-TV channels on conventional VHF/UHF channels (VSB vestigial side band; any TV system and Colour system).

- An SRF headend includes:

- As many SRF receiving modules as free-to-air TV programmes to be distributed.
- One HPA amplifier that amplifies the sum of the combined output TV channels from the receivers.
- One or more CFP power supply.
- One or more rack-frames or wall fixing base plates. The base plates can be joined horizontally.
- Usually, one housing unit.
- If the headend is voluminous, one or more AMX-400 combiners.

The SRF headends provide a TV multichannel signal whose level is appropriate to feed the distribution network. With a SRF installed in the headend, the end user does not require a Set Top Box or any additional devices to view the clear digital TV programs being distributed. An extension input at the HPA amplifier allows easy coupling of the wideband 47-862 MHz signal provided by another existing headend.

A SRF receiving module carries out the complete channel processing from the input to the output:

- tunes a QPSK Sat-IF digital channel in the 950-2150 MHz band,
- selects a TV programme from the multiplex received, and
- directs it to a conventional TV channel which is selectable throughout the 45-862 MHz band.

Range includes different models for VSB output channel spectrums; for B/G, D/K, I, L or M/N TV system; and for mono or A2 stereo/dual sounds.

- **Vestigial side band twin modulators.**

- The twin ones integrate two modulators in one module.
- IF modulation and SAW filtering for maximum harmonic reduction and true VSB response. Adjacent channel operation.
- Frequency agility. Any selectable TV channel within the 45-862 MHz band. PLL frequency synthesized.
- Built-in test pattern generator.
- In twin modulators, the two generated TV channels are combined internally to make up one bi-channel output signal.

- Frequency conversion of Sat-IF channels coming from different satellites or polarizations in order to establish a new frequency plan where all the converted channels are transmitted on a single cable.
- Use with digital channels.
- Triple Converter. Conversion of three channels.
- Input mode configurable:
 - a) Loop-through, which facilitates interconnection of several modules to convert many channels transported by a down-lead cable.
 - b) Two independent inputs, for converting one channel transported by a down-lead cable and two channels transported by another.

IKUSUP bus connector		(2x) 4-pin socket
Dimensions	mm	230 x 195 x 32

• Digital Transmodulation (DVB-S/S2 to DVB-C).

The DVB-S/S2 channels located in the Sat-IF frequency band (950-2150 MHz) are transformed to DVB-C channels (16 to 256 symbols) located in the 45-862 MHz band.

• A MDI headend includes:

- As many MDI Transmodulators as QAM channels to be distributed.
- One HPA Amplifier that amplifies the sum of the combined output QAM channels from the transmodulators.
- One or more CFP Power Supplies.
- One or more Rack-Frames or wall-fixing Base-Plates. The base-plates can be joined horizontally.
- Usually, housing units for the base-plates.
- If the headend is large, one or more AMX-400 combiners.

The MDI headend provide a QAM multichannel signal whose level is appropriate to feed the distribution network. An extension input at the HPA amplifier allows easy coupling of the wideband 47-862 MHz signal provided by another existing headend. The user requires a DVB-C Receiver to convert the QAM signals into the appropriate signals that can be accepted by a conventional TV set, and to control access to encrypted TV programmes.

DVB-C output

- **Digital Transmodulation (DVB-T to DVB-C) with Transport Stream Processing.**

The DVB-T channels located in the 174-230 MHz or 470-862 MHz bands are transformed to DVB-C channels (16 to 256 symbols) located in the 47-862 MHz band. NIT table can be adapted to the new network created.

- A TDI headend includes:

- As many TDI Transmodulators as QAM channels to be distributed.
- One HPA Amplifier that amplifies the sum of the combined output QAM channels from the transmodulators.
- One or more CFP Power Supplies.
- One or more Rack-Frames or wall-fixing Base-Plates. The base-plates can be joined horizontally.
- Usually, housing units for the base-plates.
- If the headend is large, one or more AMX-400 combiners.

The TDI headends provide a QAM multichannel signal whose level is appropriate to feed the distribution network. An extension input at the HPA amplifier allows easy coupling of the wideband 47-862 MHz signal provided by another existing headend. The user requires a DVB-C Receiver to convert the QAM signals into the appropriate signals that can be accepted by a conventional TV set, and to control access to encrypted TV programmes.

ClassA modules with IKUNET communications bus that allow all the modules to be adjusted and controlled as a headend.

It allows channels to be added/modified without having to retune the television sets

Common interface

Universal input tuners:
DVB-T/T2, DVB-S/S2, DVB-C

Easy-to-adjust headend using a Wizard application

Selectable DVB-T or DVB-C output

More channels in less space

MPEG4

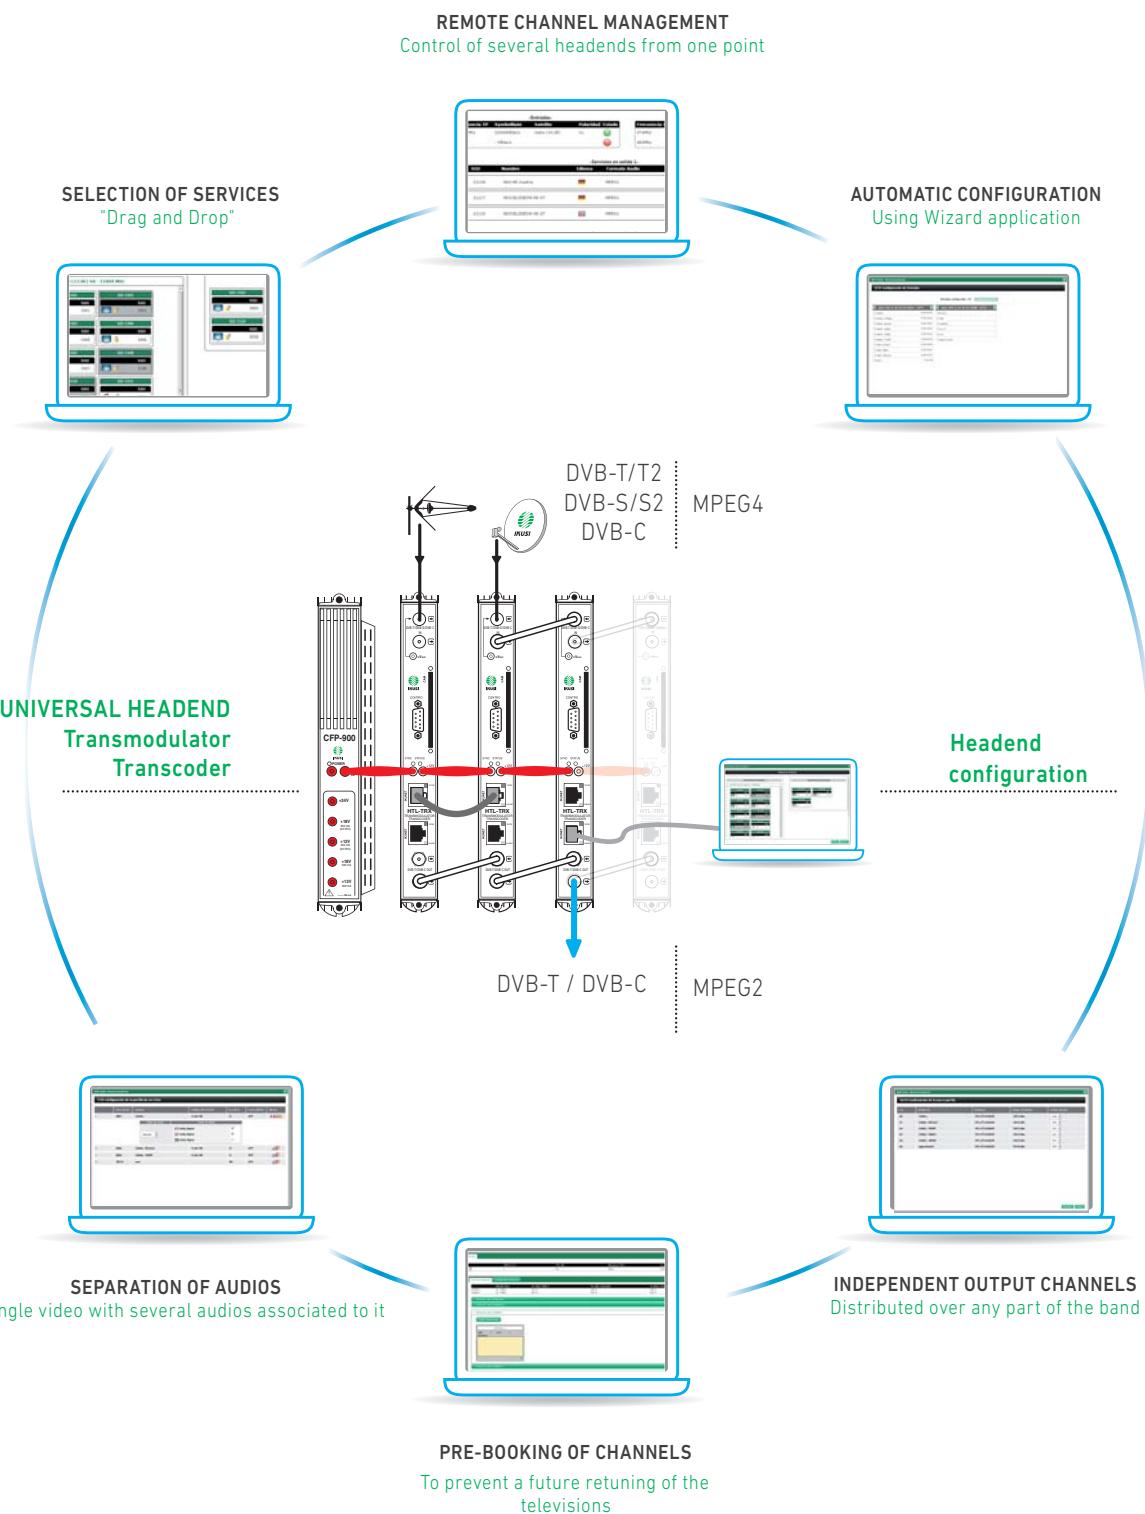

MPEG4 to MPEG2 transcoding

MPEG2

Remote configuration through web interface.

DVB-T and DVB-C output

Double transmodulator DVB-T/T2 ; DVB-S/S2 ; DVB-C ► DVB-T and DVB-C
MPEG4 ► MPEG2 transcoder NEW PRODUCT

- **Transcoding of MPEG4 to MPEG2 input services.**

Versatile transmodulation of DVB-T/T2, DVB-S/S2 and DVB-C channels to DVB-T/DVB-C channels.

- The HTL-TRX module can receive 2 DVB-T/T2 or DVB-S/S2 or DVB-C muxes and combine them on 2 DVB-T or DVB-C output channels. It handles HD and SD services both on MPEG4 H.264 and on MPEG-2, allowing HD contents to be received on SD televisions.
- One module acts as the "master" to ensure the configuration (remote or local through PC) is carried out at the complete headend level, through the IKUNET bus and not module by module.
- It has a Common Interface (EN 50221) for discretionary decryption of programmes in accordance with the inserted CAM module.
- With Ikusi's Transcoding solution, the old TV SD equipment does not need to be changed and the latest content can still be enjoyed. The Ikusi headend offers the chance of deciding when and how to up-date the television sets.
- It allows a future increase in channels to be foreseen in order for the televisions to have them already on their lists, avoiding the need for retuning.
- It allows a video service to be sent with several different languages without taking up more space than that corresponding to an RF channel. The television shows "a programme" for each language, avoiding the need for users to have to choose their "language" on the television remote control.
- It is compatible with the PC application: "IKUSI HEADEND DISCOVERY" (this can be downloaded from <http://areacliente.ikusi.tv>).
- It allows grids of channels to be created and managed remotely, ensuring that the grid is completely customisable without having to intervene in-situ.
- It allows multiple headends to be managed from a single point for efficient maintenance.
- The two COFDM channels can be distributed onto any part of the band.
- The Wizard installation assistant allows us to carry out a step-by-step headend configuration that is quick and easy. It is executed by turning slave into Master or entering from the general menu.
- Total control of the multiswitch. Fitted with DiSEqC (v. 2

DVB-T and DVB-C output

DVB-T/T2 ► DVB-T and DVB-C twin transmodulator

MPEG4 ► MPEG2 transcoder

- Conversion solution for DVB-T/T2 MPEG4 services to DVB-T/DVB-C MPEG2. This includes the transmodulator function of DVB-T2 channels to DVB-T/DVB-C channels

- The terrestrial HTL-TT2 module can receive 2 DVB-T/T2 muxes and combine them on 2 DVB-T/DVB-C output channels. It handles HD and SD services both on MPEG4 H.264 and on MPEG-2, allowing HD content to be received on SD televisions.
- One module acts as the "master" to ensure the configuration (remote or local through PC) is carried out at the complete headend level, through the IKUNET bus and not module by module.
- With Ikusi's Transcoding solution, the old TV SD equipment does not need to be changed and the latest content can still be enjoyed. The Ikusi headend offers the chance of deciding when and how to up-date the television sets.

Operation modes		2K ; 8K	
MER	dB	> 40	
Output level	dB μ V	80	
Adjustable output level	dB	-15	
Modulation formats		QPSK ; 16QAM ; 64QAM	
Code ratio		1/2 , 2/3 , 3/4 , 5/6 , 7/8	
Guard interval		1/4 , 1/8 , 1/16 , 1/32	
Output bandwidth	MHz	6 / 7 / 8	
Output loop step attenuation	dB	1.1	
Frequency stability	ppm	$\leq \pm 30$	
General			
Configuration		PC. Web, Ikusi Headend Discovery	
Firmware upgrade		Web Interface	
Supply voltage	VDC	+12	
Consumption	A	1.6 (no CAM)	
Operating temperature	°C	0 ... +45	
Common interface		1 slot (EN50221)	
IKUNET bus connector		2x RJ45	
Dimensions	mm	230 x 195 x 32	

- HTL-ST2 is a product which is designed given the increasing need for complex channel grids in hotels, with multiple inputs which increase the density of channels handled by each module.
- The module input connection is software configurable ("2 input" or "1 input+loop") and is equipped with DiSEqC function, meaning each module can be tuned at two satellite frequencies with different polarities. Each transmodulator includes a Web server.
- Pre-reserve channels: Envisages a future increase in channels, meaning the television sets have them in their lists and do not need to be retuned in the future.
- Separation audios: Sends a video service with several different languages or audios using the same space as for an RF channel. The television present "a programme" for each language, avoiding the need for the user to choose "language" with the remote control.
- The HTL-ST2 transmodulator is compatible with the application for PC: "IKUSI HEADEND DISCOVERY" (can be downloaded from ikusi.tv).
- This tool allows the installer to detect the headend modules without having to modify the PC network card.
- The HTL-ST2 headend can be used to create channel grids and manage them remotely, providing a fully customisable grid without the need for on-site intervention.
Used to manage multiple headends from a single point for efficient maintenance.
- Independent output channels: The two COFDM channels can be distributed in any part of the 51-858 MHz band.
- The step-by-step Wizard can be used to quickly and straightforwardly configure the headend.
- Total control multiswitch. Combines with greater availability of channels and satellites, without having to physically interact with the headernd.

Power supply

MODEL		CFP-900
REF.		4492
Regulation type		switch mode
Mains supply voltage (50/60 Hz)	VAC	100-240
Outputs		+12V (9A) ClassA modules +24V (60mA) for mast preamplifiers +18V (300mA) for LNB +18V / 22kHz (300mA) for LNBB +13V (300mA) for LNB +13V / 22kHz (300mA) for LNBB
Max total current for +24, +18 and +13V	mA	700
Efficiency	%	> 85
Operating temperature	°C	-10 ... +55
Mains lead		Yes
Dimensions	mm	230 x 195 x 48

- The CFP-900 power supply has been designed to supply enough power to most ClassA headend configurations.

Its high output current capacity (9A) means it must be used with a high current plug bridge, supplied with all IKUSI ClassA devices and vital in installations that demand more than 5A (see picture).

- The CFP-900 power supply also has all the necessary auxiliary outputs to supply external elements like preamplifiers and LNBs.

Other differentiating characteristics are its high efficiency and the fact that it implements a power factor corrector to optimize mains consumption.

Multiplexor

MODEL		AMX-400
REF.		4433
No. of inputs	MHz	4
Frequency range	dB	45 -862
Response flatness	dB	±1.5
Gain	dB	7
IMD for 4x6 channels, 72 dBµV input level	dB	-75
Output variable attenuator	dB	0 - 10
Input and output return loss	dB	≥ 10
Output test	dB	-20 ±1
Supply voltage	VDC	+12
Consumption	mA	470
RF and test connectors		Female F
DC connectors		banana socket
Dimensions	mm	230 x 195 x 32

- Application in large ClassA headends where the modules (processors, receivers, transmodulators, modulators, regenerators) are mounted in several deck-arranged rack-frames or baseplates. The AMX-400 is a 4-input combiner that has been designed to combine up to 24 channels (6 channels per input).
- The system is expandable, so that it is possible to combine up to 96 channels by using 4 AMX-400 and one final passive combiner (or another AMX at IMD decrease's expense).
- The sum of the combined signals is connected to the HPA launch amplifier.

Power amplifier

MODEL		HPA-125
REF.		4427
Technology		Push-pull
Bandwidth	MHz	47 - 862
Gain	dB	45
Interstage variable attenuator	dB	0 - 20
Noise figure	dB	≤ 6
Output level (IMD3 -60dB, DIN 45004B)	dB	≥ 125 ¹
Output level (IMD2 -60dB, EN 50083-3)	dB μ V	≥ 120
Output level (CTB -60 dB, EN 42 channels)	dB μ V	≥ 111
Output level (CSO -60 dB, EN 42 channels)	dB μ V	≥ 115
Input test	dB μ V	-20 ± 1.5
Output test	dB	-30 ± 1
Extension input	Bandwidth	47 - 862
	Gain	6
Supply voltage		VDC
Consumption		mA
RF and Test connectors		female F
DC connector type		banana socket
Dimensions		mm
		230 x 195 x 32

- Amplification of the combined multichannel signal in a ClassA assembly.
- Variable attenuation is shared on two interstage sections, featuring delayed behaviour on the first one. Maintenance of a low noise figure.
- Extension input allows coupling of the wideband signal provided by another existing headend.
- Each module is packed with a DC plug bridge, 53 mm length, for connection of +12 VD voltage.

Sat-IF combiner/amplifier

MODEL		HPA-920
REF.		4437
Sat-IF band	MHz	950 - 2150
Response flatness	dB	±1
Nominal gain	dB	40
Continuous gain adjustment	dB	0 - 18
Slope switchable	dB	0 / 7
Output level (-35 dB IMD3, EN 50083-3)	dB μ V	≥ 120
Input/output return loss	dB	≥ 10
Noise figure	dB	< 7
TV band	MHz	5 - 862
Output test (TV+IF)	dB	TV: -30 ± 1 .. IF: -30 ± 1.5
Supply voltage	VDC	+12
Consumption	mA	250
Dimensions	mm	230 x 195 x 32

- Application in ClassA headends to drive Sat-IF distribution lines. One HPA-920 per polarity or IF signal being distributed.
- 1 satellite IF input port, with adjustable gain and 0 / 7 dB switchable slope to compensate for cable losses ; 1 terrestrial TV coupling port ; 1 combined TV+IF output port; 1 output test port.
- "Banana" socket to connect the power for the attached LNB.

Rack cabinets 19" for ClassA headend

NEW PRODUCT

MODEL	ARE-120	ARE-220	ARE-320	ARE-420
REF.	2174	2169	2171	2172
Panel height	U	12	22	32
Outside dimensions (hxwxd)	mm	658 x 600 x 450	1110 x 600 x 600	1649 x 600 x 600
Packed weight	kg	30	63	76
				88

- Inner and outer frame made in high quality steel.
- Four inner 19" frames manufactured in 2 mm.
- Front glass and vented door with lock.
- Top and bottom cable entrance.
- 19" schuko socket board.
- Caged nuts included.
- High resistance casters.
- The cabinet has a temperature control unit on its top which controls the operation of the fans.

Programming unit

MODEL	SPI-300
REF.	4070

- For programming the ClassA modules. Cable connection to the DB-9 front panel socket.
- 20x4 character alphanumerical display. Numerical and function keys.
- Microprocessor controlled. User friendly software (selectable language: english, spanish, french). Built-in diagnostic and error identification. Module firmware update. Firmware of the SPI-300 can also be updated through a PC.
- Capacity of 500 preset memory allocations for repetitive ClassA module configurations.
- No battery required. Powered through the interface lead (max consumption: 150 mA). DC jack to connect a +15 VDC voltage from an auxiliary power supply when updating the internal firmware through a PC.
- Dimensions: 160x75x40 mm.

NEW!

Multistandard

Ikusi Flow adapts to your present
and to your future

Double secure

Premium content always protected
by including DRM protection

Ikusi Flow modules

FLOW IN (Ref. 4306) y FLOW IN4 (Ref. 4319)

Input module. Frontend.

- . Double tuner. Universal Input module DVB S/S2/T/T2/C.
- . Auto Scan: Discovers all the services in the cables.
- . HOT SWAP without reconfiguring manually.

FLOW SEC (Ref. 4311)

Security management module.

- . Decrypting function (CAS) and re-encrypting function (DRM).
- . 2 x CI slots per module.
- . Manages streams coming from any input and going to any output ("uncoupled" input, CAM and output).
- . CAM restoration in case of decryption failure.
- . Supports up to 16 SPTS per CAM (up to 32 SPTS per module).

FLOW ENC (Ref. 4315)

Encoding module.

- . Encodes 4 x HDMI input signals.
- . H.264 MPEG-4 or MPEG-2 video compression.
- . Full HD quality.
- . Up to 40 x HDMI inputs in 4RU space.

FLOW OUT (Ref. 4313)

Output module. Backend.

- . Quad Universal and Multistandard output module DVB-T & DVB-C.
- . Four carriers in 8K.
- . Up to 8 SPTS per carrier = up to 32 SPTS per module.
- . Output level: 78 to 108 dbuV.

FLOW HUB (Ref. 4314)

Control unit of the platform.

- . Complete internal management .
- . Connected headend: Ikusi Flow wifi and LAN access. Local and remote management.
- . Guided installation through a wizard.
- . 2 Gigabit Ethernet ports for IP Multicast services.
- . Spare modules support for redundancy.

FLOW PSU (Ref. 4308)

Power supply for the platform.

- . More efficiency: Half-Bridge topology.
- . Thermal protection (to protect against external cooling failures).
- . Power factor corrector.

FLOW BASE (Ref. 4312)

Chassis of the platform.

- . "Self-assembly" chassis.
- . 19" rack and wall mounting with the same chassis.
- . Installation without tools or accessories.
- . Real 4 RU (including wires passing).

FLOW COVER (Ref. 4316)

Ventilation cover for the platform.

- . Magnetic attachment system with triple function: securing the cover to the chassis, electrical connection and fans speed auto-management.
- . 5 fans per cover.
- . New noiseless fans generation based on magnetic technology, without rubbing or friction.

FLOW STB (Ref. 1050)

Set-Top-Box to be integrated with FLOW DEVICE MGR.

- . High Quality Sound and Image.
- . Quick Data Processing.
- . Functions on Demand.
- . Programmable remote control.

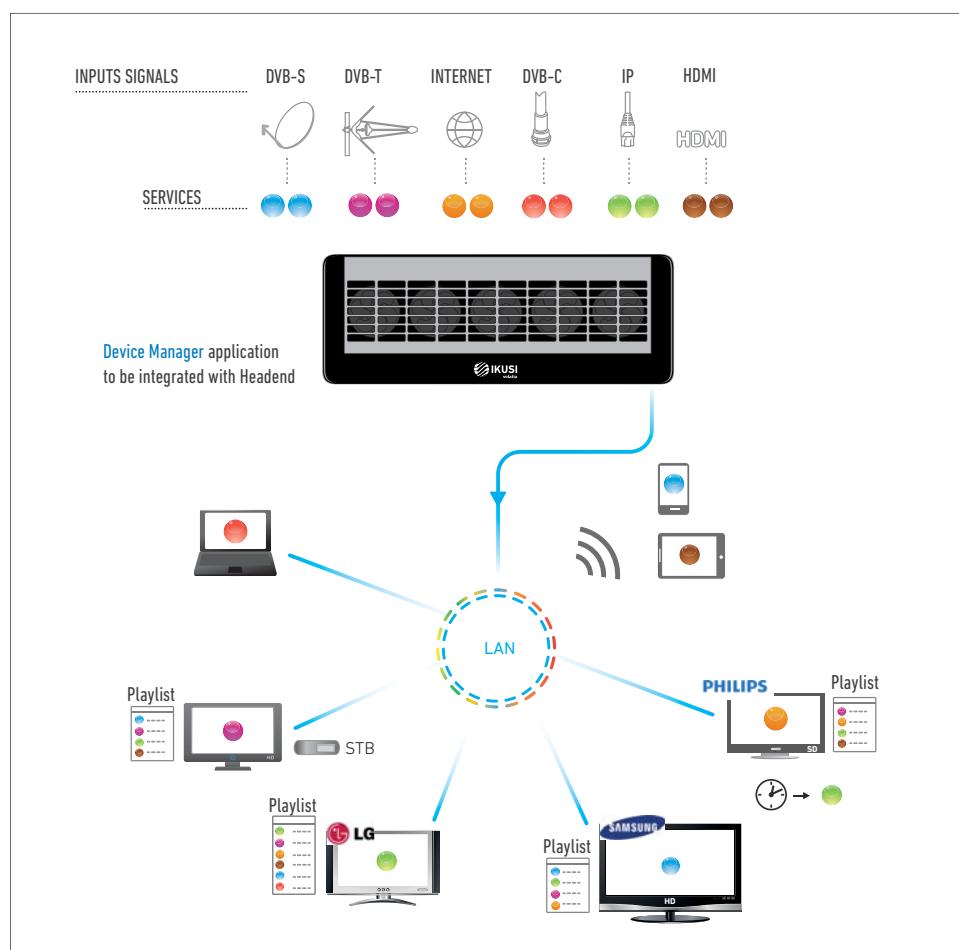

Device Manager is the new Application integrated into Ikusi FLOW that offers management of the contents and of the devices on the IPTV network in a centralised way, allowing:

- Different lists to be made, offering the possibility of sending groups of content to devices either individually or in groups. It allows the contents available to be controlled on each of the televisions.
- The content that is to be reproduced on each viewing device (or multi-screen spaces) to be selected individually in a remote manner, allowing what is being reproduced at each viewing point to be managed and controlled.
- Televisions by the main manufacturers can be turned on, turned off and the sound controlled as on or muted. The list of available services can be allocated to groups or individual Televisions and channels can be remotely changed. The state of the Television can be viewed remotely as well as seeing what channel is playing.

Ikusi Device Manager is compatible with the main television brands:

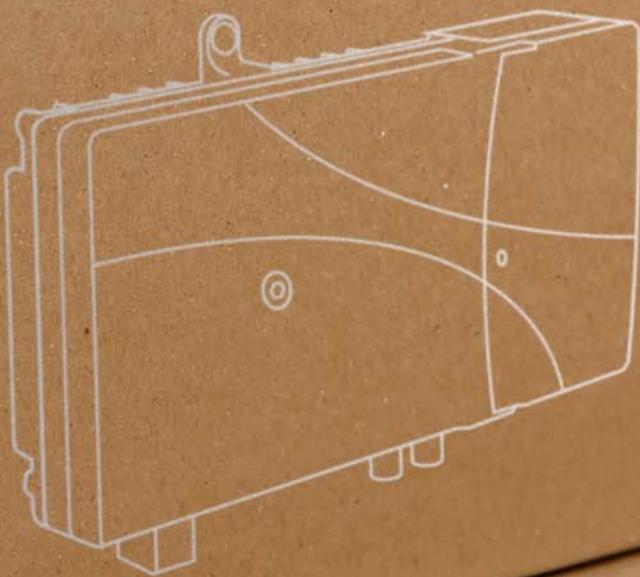

Installation example

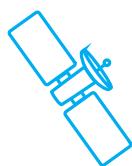

Distribution

TAE and SAE series

862 MHz and 2150 MHz amplifiers with active return path.

Terrestrial and IF satellite distribution signals

TV signal output and reverse path input

Attenuation and equalization adjustments of TV signals by potentiometer

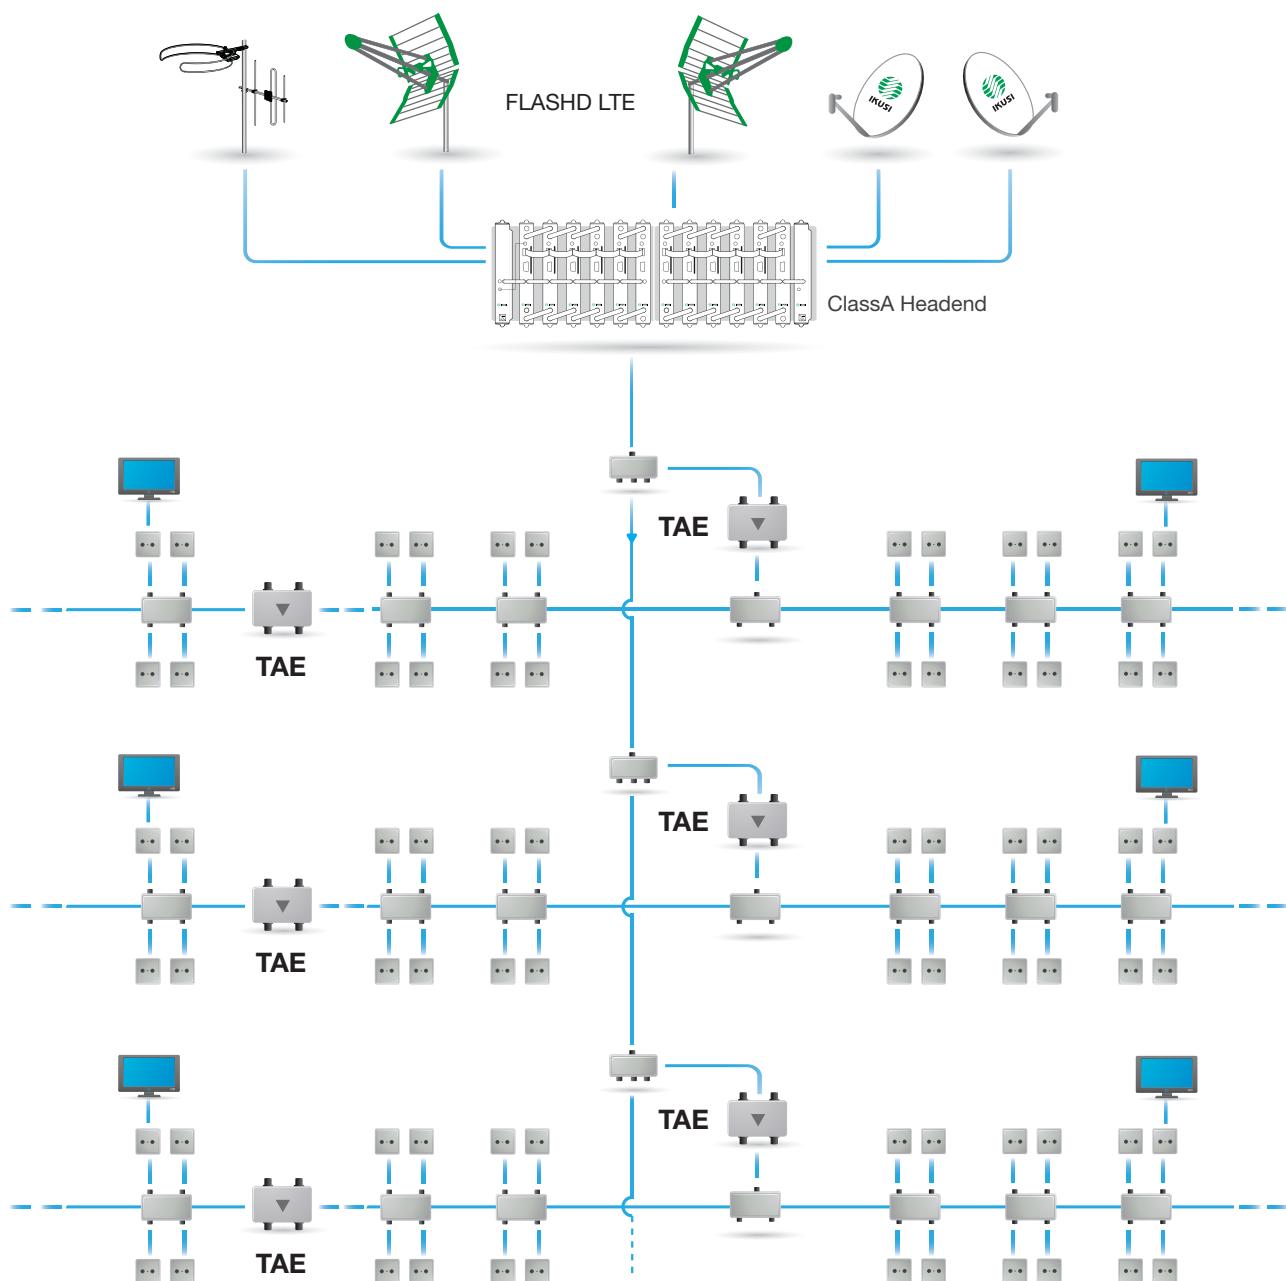

Low consumption

Attenuation and equalization adjustments

- Distribution of television, sound and interactive multimedia signals.
Ideal for hotels and dense multiple dwelling units.

Installation example

TAE amplifiers series

TAE1125 . TAE1118 . TAE1120

- TAE series, ideal for hotels and dense multiple dwelling units.
- 862 MHz amplifiers with active return path on all models.
- Mains or line powering 50/60. Operation shown by led. Mains lead insertable in connection socket.
- Attenuation and equalization adjustments of TV signals by potentiometer. Selection of return signal attenuation by the insertion of small plug-in links provided.
- Forward and reverse output test.
- Power Doubling technology (TAE1125) and Push-pull technology (TAE1120 and TAE1118).
- Zamak housing with protective cover for the adjustment controls. Wall fixing. Indoor mounting. Grounding terminal.
- Removable Power Supply.

SAE amplifiers series

SAE-912 . SAE-916

SAE-920

- Distribution of terrestrial TV, satellite IF and multimedia signals.
- 1 RF input - 1 RF output.
- Terrestrial and satellite frequencies amplified separately.
- Passive or active return path, with respective 35/45 MHz or 65/86 MHz splits.
- Attenuation and equalization adjustments of TV and IF signals by potentiometer.
- Zinc alloy housing with protective cover. F connectors. Wall fixing. Indoor mounting.

- Application in collective installations with two download distribution cables carrying 2 satellite IF and 1 terrestrial TV signals.
- 1 TV + IF-1 input — 1 IF-2 input
1 TV + IF-1 output — 1 TV + IF-2 output
- Separated amplification paths for TV, IF-1 and IF-2 signals, each including attenuation and equalization adjustment potentiometers.
- GaAs-MESFET technology used for terrestrial amplification.
- External 75Ω output test ports.
- Zinc alloy housing with protective cover for adjustment potentiometers. F type connection. Wall-fixing
- Indoor mounting. Grounding terminal.

Standalone and Cascadable Multiswitches

NEW PRODUCT

Complete range of multiswitch equipment for standalone or cascadable installations including, terrestrial and satellite signals.

European Product

Shielded multiswitches with integrated power supply

Distributions up to 32 users

DiseqC2.0

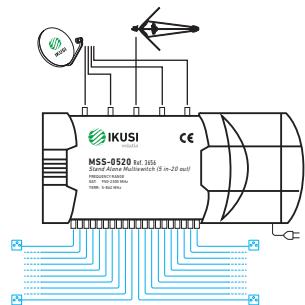

They support DiseqC2.0 commands

 A solution for distributing the signals from 1 to 4 satellites for up to 32 users.

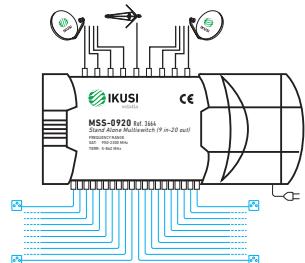

Installation example

STANDALONE

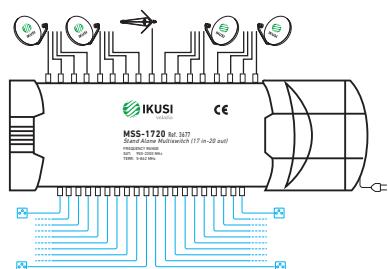

1 satellite and 20 users

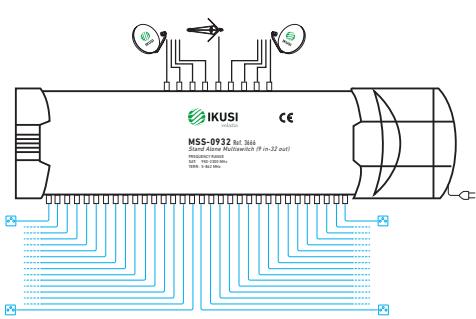

2 satellites and 20 users

4 satellites and 20 users

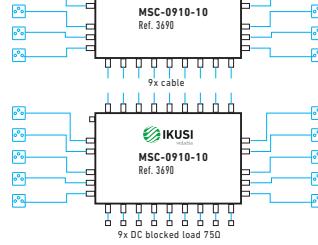

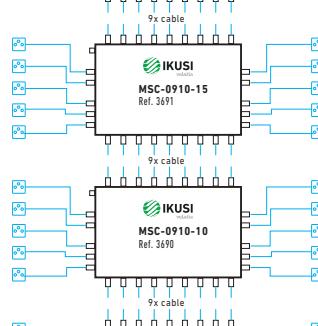

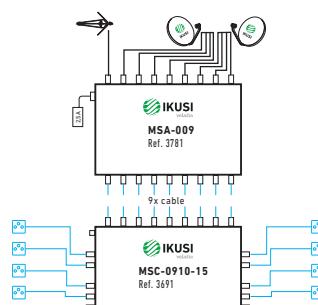

2 satellites and 32 users

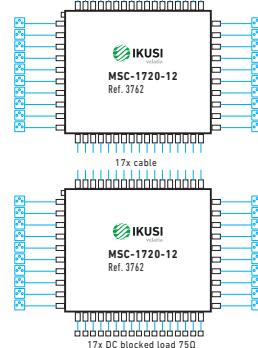

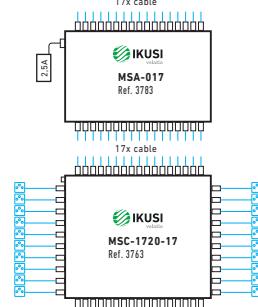

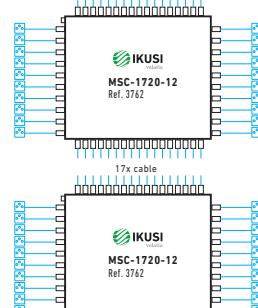

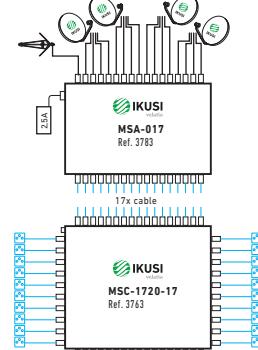

CASCADABLE

2 satellite and 50 users

CASCADABLE

4 satellite and 120 users

Standalone Multiswitches

5 inputs. MSS series

LTE band-stop filter

Filter with two options of cut-off: At channel 59 or 60

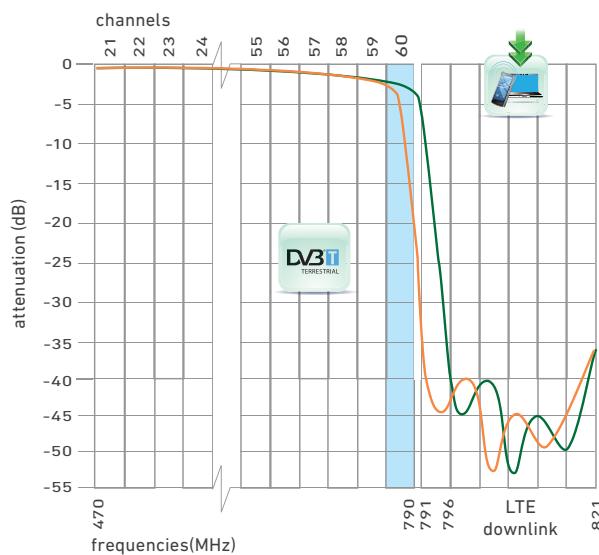

- High-rejection helicoid filter designed with a new concept.
- One single filter with two stop frequencies on channel 59 or 60, depending on the radio spectrum, the FLTE601 can be configured as a pass filter up to channel 59 or channel 60. A built-in key makes it easy to do.
- Designed for most installations, comparable with the top-range filters on the market, capable of providing maximum protection to TV installations, preventing damaging LTE down-links.
- In cases in which the TV installation is very close to the LTE base stations and channel 60 is available, it may be necessary to combine the LTE Flashd Antenna + FLTE601 filter.
- Minimal losses on the highest TV channel and rejection of more than 45 dB to the LTE frequencies.
- Equipped with a connectorized coaxial cable coupling on both ends, making the connection easier for the installer, with the subsequent time savings.
- Housed in weatherproof box with an IP55 protection level.

MODEL	FLTE601		
REF.	1435		
Two cut-off options		59 channel	60 channel
Pass band frequencies	MHz	470 ... 782	470 ... 790

Analog modulator

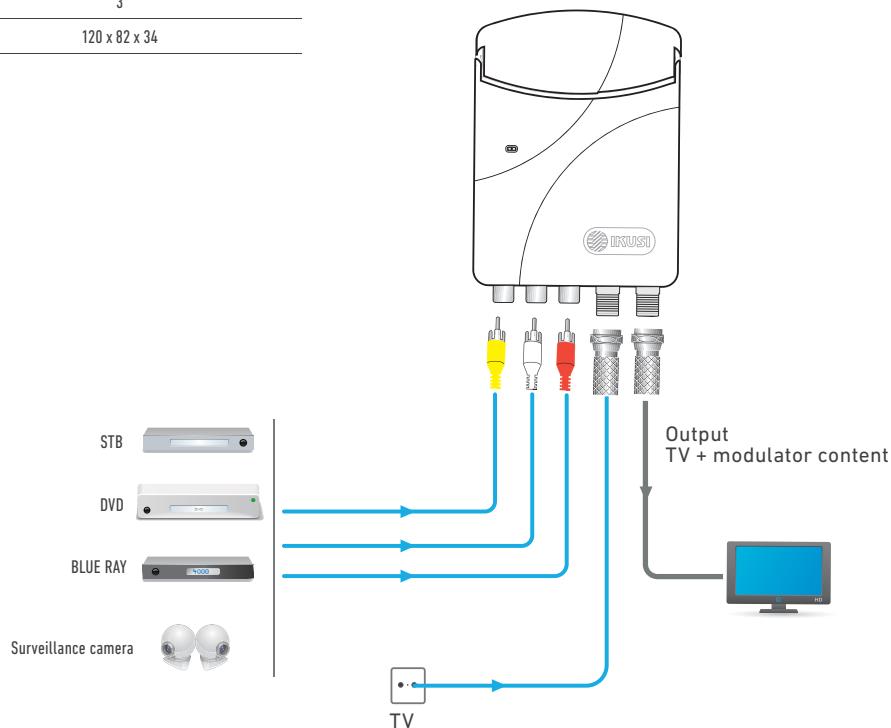

Home DSB TV standalone modulator

- Appropriate use with TV satellite receivers, VCR's and video cameras.
- Direct video/audio modulation. Multistandard. Mono sound. DSB (Double Side-Band) TV output channel.
- Agile selection of channel. Possibility of shifting the standard video carrier frequency up to ± 2.5 MHz.
- Possible connection of stereo sound sources. L and R signals are summed by the modulator itself.
- Built-in test pattern generator.
- Two buttons and one 2-digit LED display for selection and programming of operating parameters.
- Panel potentiometers for audio modulation and RF output level settings.
- Input port for RF coupling of antenna/SMATV signal.
- External plastic box. Indoor mounting. Wall fixing by two screws. AC power indicator.
- Insertable mains lead.

MODEL	MAW-200	
REF.	3029	
Output TV channel frequency	MHz	45 - 84 174 - 300 470 - 862
Selectable TV system		B, G, H, D, K, I, L, M, N
Output channel spectrum		Double Side Band
Audio operation mode		Mono
RF coupling frequencies	MHz	47 - 2150 (TV+IF)
Fine tuning of video carrier frequency	MHz	± 2.5 (steps of 0.25 MHz)
Adjustable output level	dB μ V	65 - 85
Switchable carrier level ratio	dB	12 \pm 3 / 16 \pm 3
Video input level	Vpp	0.9 ... 1.1
Video modulation depth	%	81 (typ.)
Audio input level	mV	150 ... 775
Weighted S/N ratio	dB	> 55
Mains voltage	VAC	230 - 240
Consumption	W	3
Dimensions	mm	120 x 82 x 34

All the cables are manufactured using the Physical Process. Advantages: high mechanical strength, optimum electrical isolation and good stability of characteristics over time.

* LSOH: Low Smoke Zero Halogen. Outer sheath of the CCH-175 does not contain halogens. It is flame retardant (EN/IEC 60332-3), the density of the smoke produced when the cable is burnt is very low (EN/IEC 61034-2) and the fumes are nontoxic (IEC 60754-2).

IF ACCESSORIES	FIS-950	1107	950-2150 MHz IF amplifier. Sloped gain: 12 up to 20 dB. Noise figure: 7 dB. Operating voltage: +15 ... +18 VDC. Consumption: 40 mA
	FAV-920	3242	18 dB variable attenuator. Min attenuation: ≤ 1.5 dB (5-1000 MHz) and ≤ 4 dB(1001-2150 MHz). DC by-pass. F-type male-female connectors

Distribution with fibre optics

An optical system formed by an emitter, a receiver and splitters.

TV+IF output signals

Replaceable power supply

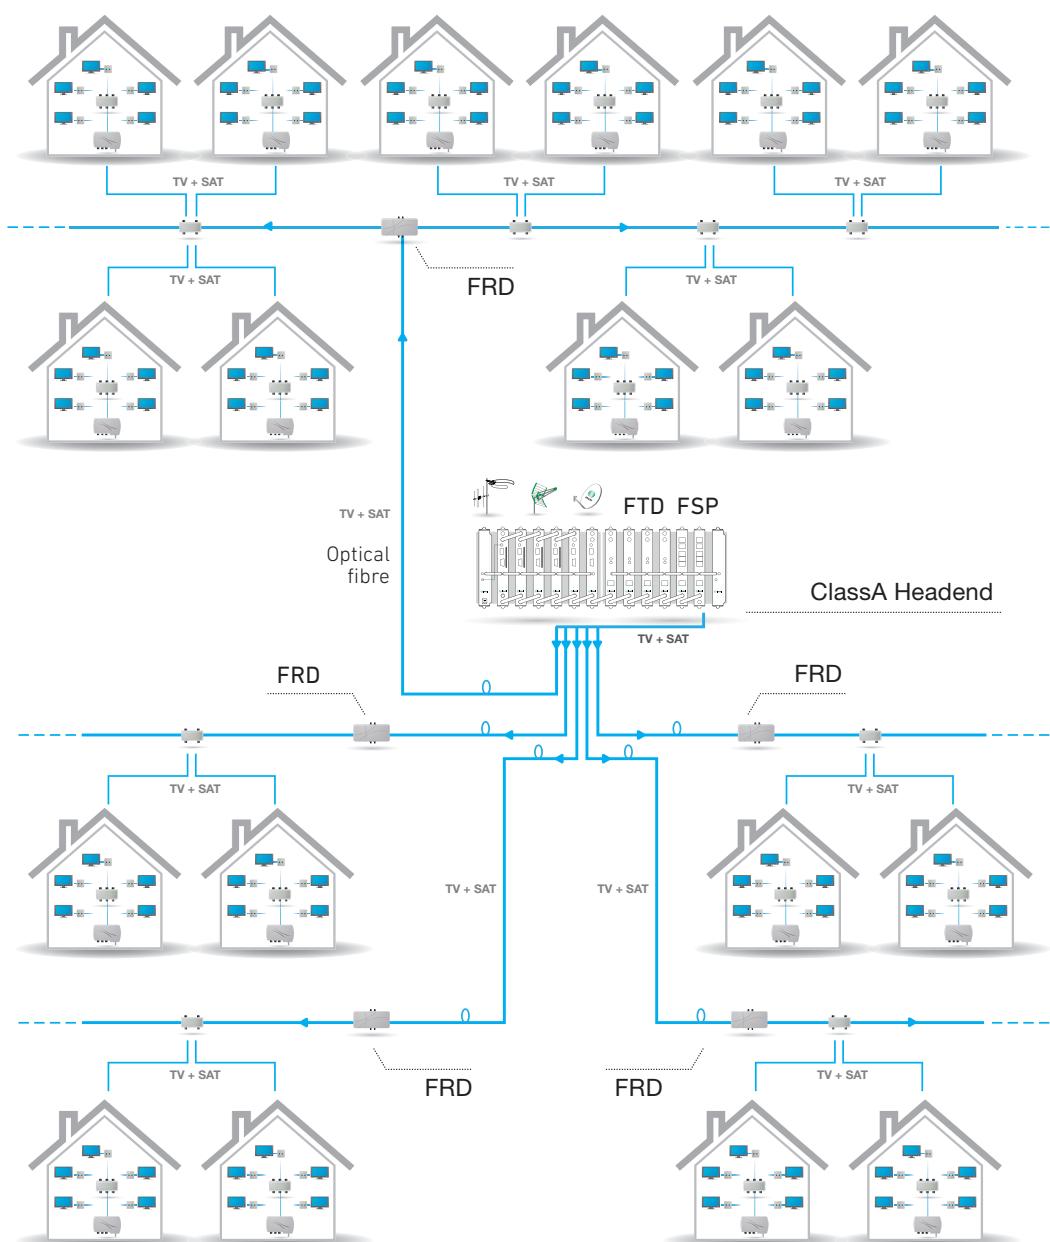

Connection of singlemode type optical fibre

Easy to set up

-  Solution for distribution of DTT and satellite IF signals over large collective installations: residential districts, hotels, hospitals.

Installation example

TV+SAT-IF optical transmitter

- 1 TV input (45-862 MHz) — 1 SAT-IF input (950-2150 MHz) — 1 Optical output (1310 nm). Connection of singlemode type optical fibre.
- Solution for distribution of terrestrial TV and satellite IF signals (analog and digital) over large collective installations: residential districts, hotels, hospitals.
- Ultralineal, APC-controlled, 4 mW DFB (Distributed Feedback) laser. Fully compatible with PAL, SECAM, NTSC, FM, DVB-S, DVB-T, DVB-C and other standards.
- TV and SAT-IF separate ways with very high RF amplification gain. Independent OMI settings for TV and SAT-IF.
- DC powered by a CFP power supply module. Mountable on baseplates or rack-frame of ClassA headend.

MODEL		FTD-420	
REF.		4915	
Optical output power	mW	4 (=6 dBm)	
RF inputs		2 TV (45-862 MHz) IF (950-2150 MHz)	
Optical section			
Optical wavelength	nm	1310 (± 20)

Adjustm. of TV level to laser - TV-OMI adjustment	dB	-15 ... 0
Adjustm. of IF level to laser - IF-OMI adjustment	dB	-15 ... 0
RF input impedance	Ω	75
RF input return loss	dB	> 12 (TV) .. > 10 (IF)
General		
Power requirements		+12 VDC / 650 mA
DC connector type		banana socket
Dimensions	mm	230 x 195 x 32

Optical splitting modules

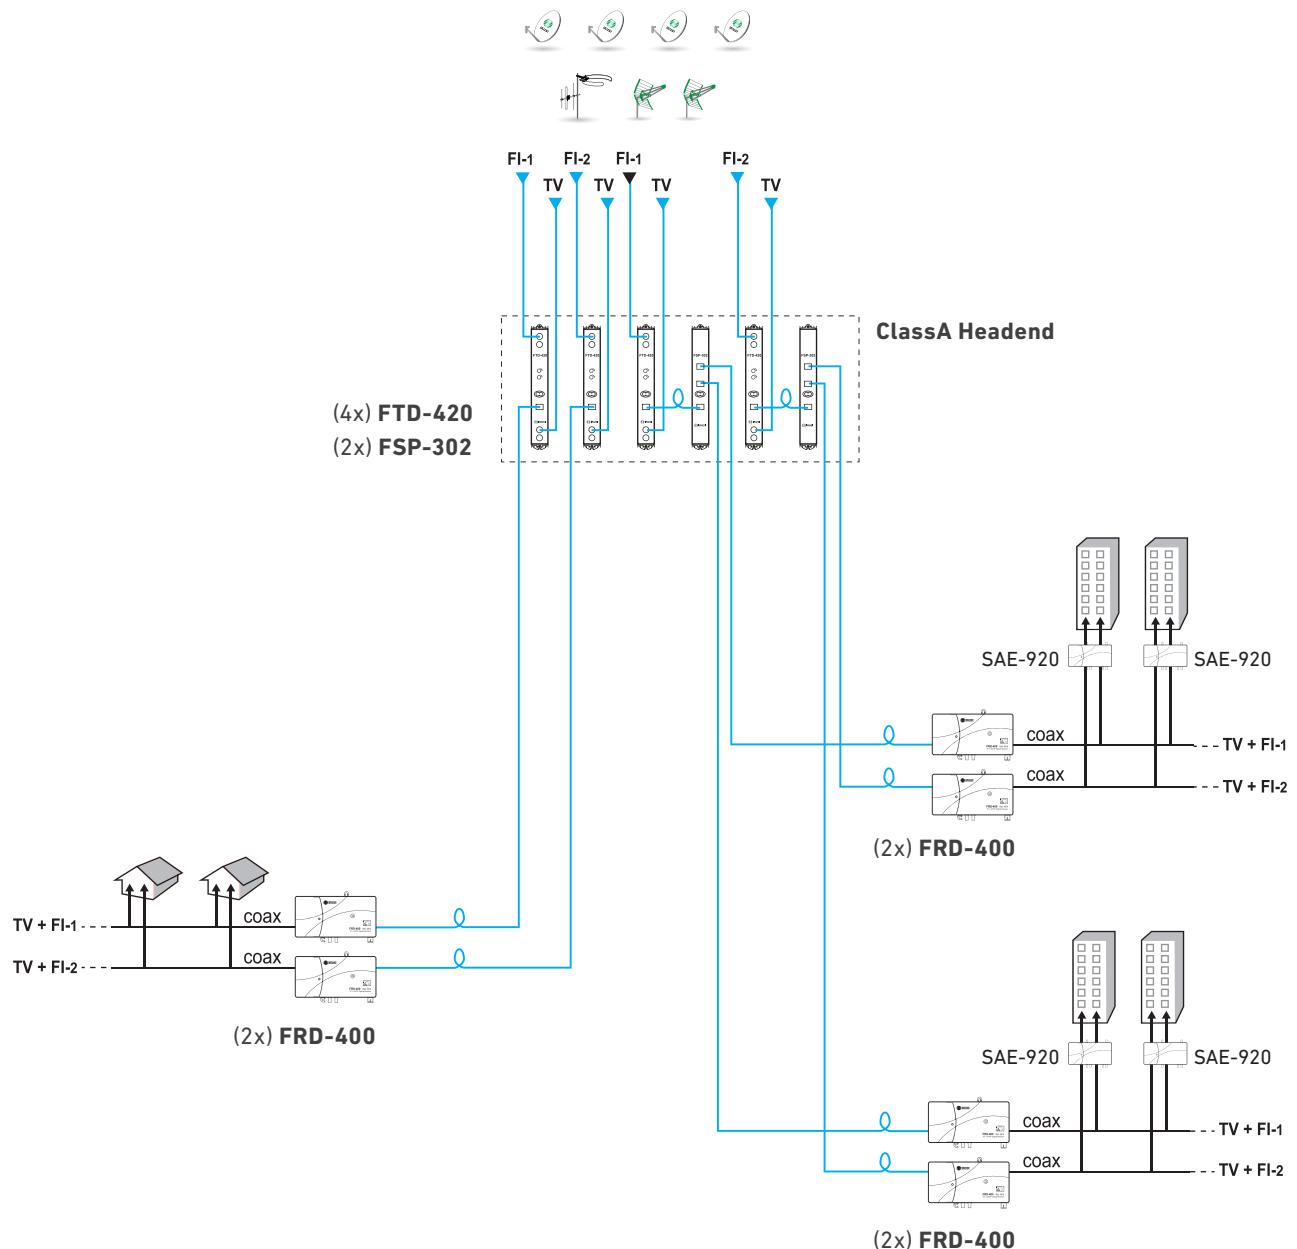

- 2, 3, 4, and 6-way optical splitters for singlemode fibre applications.
- Mountable on baseplates or rack-frame of ClassA headend. The splitters share out the optical power of FTD transmitters to feed multiple field nodes, hence maximizing the use of optical transmission equipment.

Dimension	mm	230 x 195 x 32			

-  A solution for the distribution DTT and IF satellite signals in extensive group installations.

Installation example

TV+IF-SAT optical receiver

- 1 optical input (1290-1600 nm) — 1 RF output (45-2150 MHz).
- Connection of singlemode type optical fibre.
- Especially designed for the delivery of terrestrial and satellite signals (analog and digital) over large collective installations.
- Mains powered, 50/60 Hz. Electrical safety protection level: Class II. Insertable power cord with bipolar plug.
- Injection-moulded zinc alloy housings. Wall-fixing. Indoor mounting.

MODEL		FRD-400

Optical LNB

LNB with optical output

NEW PRODUCT

- A solution for satellite signal distribution, covering long distances without hardly any loss (< 0,3 dB/km).
- With an output power of 7 dBm, it can feed up to 32 distribution points over a great distance.
- It can distribute four polarities or 4 bands using a single optical fibre.
- An FC/PC connector allows single-mode optical fibre connection.
- Power supply using an independent F connector.

MODEL		OPTICAL-LNB	
REF.		4956

Ikusi was born more than 45 years ago. Today, it has a team made up of over 800 professionals and clients in over 80 countries, devoting 4% of its invoicing to R&D+i. Ikusi is present in 9 countries: Germany, Australia, Chile, Colombia, USA, Spain, UAE, France and Mexico.

In addition to this, Ikusi forms part of Velatia, a family, industrial and technological group with a global vocation, made up of a multicultural team of almost 2,900 people from 20 countries. Velatia has offices in 19 countries, 15 manufacturing centres and a first rate Research and Technology Centre on a worldwide scale.
